Thread: [Omcticker.com - Down](#)

Ombra - March 25, 2015, 9:36 am

Site is down [@Abe](#) what's happening? :(

TRH4CK - March 25, 2015, 9:38 am

His other website, omnichain is down too. Probably some maintenance or something like that..

Ombra - March 25, 2015, 9:45 am

I didn't notice that, well hopefully both will be up soon.

.Matt - March 25, 2015, 11:19 am

My site (value.omnicoin.net) is also down due to it running off of omnichains api. I'll move to pure exchange API to stop this problem.

EDIT: Fixed.

Doctor Blue - March 25, 2015, 12:53 pm

It's most likely because he's migrating from Apache to nginx.

Understalker - March 25, 2015, 12:54 pm

Don't ask me, I've been trying to convince him to change for a while.

Abraham Lincoln - March 25, 2015, 1:14 pm

I'm not sure what's up with the server. I moved to nginx the other day and it runs better than apache, but has been incredibly unstable. My phone is full of uptimerobot notifications of it going down and coming back online all day today.

It just came back online a few minutes ago. I'm working to see what the issue is.

(Mar 25, 2015 12:53 PM)Doctor Blue Wrote: [\[CITE\]](#) It's most likely because he's migrating from Apache to nginx.

The migration was complete a few days ago. I haven't really touched anything since then.

Apache couldn't handle the load at all. NGinx just runs very unstable under the load...

I'm 100% sure I have seen it online a few seconds ago, but now it is down again.

Hash G. - March 25, 2015, 3:33 pm

Yes, it's very instable. I use the omnichain API for my website, but I'll maybe stop using it because it's often offline due to this.

Abraham Lincoln - March 25, 2015, 8:23 pm

I've been able to locate and isolate the source of load.

I'm working to refactor some code.

Omnicha.in and omcticker.com are back up and running smoothly again.

erjee - March 26, 2015, 3:30 am

Ombra, sorry for bother you on a wrong topic, but can you send me a PM?

I can't PM you. It's about the generator I bought today :-)

Ombra - March 26, 2015, 3:44 am

Most likely not. Learn the HTTP status codes..

Jws runs 100x more efficiently and it's a million times faster than both of the web servers combined.
