Thread: [Facebook Auto Poker \[TUT\]](#)

Saegon - March 25, 2015, 3:50 pm

Go to the facebook poke page. Open the JavaScript console (right click Inspect Element), then click "Console". Paste the following.

```
Code var buttons = [];  
function setButtons() { buttons = document.getElementsByClassName("_42ft");  
function filter() { filteredButtons = []; for(var i = 0; i < buttons.length; i++) {  
if(buttons[i].innerHTML.indexOf("Poke Back") > -1) { filteredButtons.push(buttons[i]); } } buttons =  
filteredButtons; }  
function clickButtons() { for(var i = 0; i < buttons.length; i++) { buttons[i].click(); } }  
window.setInterval(function() { setButtons(); filter(); clickButtons(); }, 1000);Press enter. Leave the  
tab open and in front while people try to manually poke you.
```

I don't get it. What does this exactly do? Explain pls

Saegon - March 26, 2015, 11:46 am

If you have any pokes, it will poke back for you. This could be useful in the so called "poking wars" on facebook.

It pokes but by code through console just like the script that invites all your friends to a page automatically
