Thread: [A Question About PS Made Containers](#)

Effexion - March 26, 2015, 4:25 am

I hate the monotone look of my site's central container. I intend to completely revamp the whole site today and plan to do so using Photoshop.

Let's say I wanted to make a navigation bar and add buttons to it in CSS later. If I was to make a 900x100 pattern and then added it attributing it's dimensions using CSS (width: 100%; height: 100px;) would this work?

Warren Buffett - March 27, 2015, 6:52 am

Yes, it would work. Though I don't know about the exact px of the height and width but as long as you have the dimensions right in CSS, then you're good.

Thanks for the helpful answer, man.

Wow, is this some sort of HTML angel I see before me? Thank you so so much for bestowing upon me your endless knowledge. Why oh why didn't I think of Youtube in the first place; instead of relying on a wide demographic of web-developers to answer my question. When I could have just entered in to YT ' A Question About PS Made Containers' That would be sure to have my problem solved in a jiffy.

Maybe you should go on to pass this advice to the masses. Forget the WWW, my man. Take that shit to the G8 Summit.
