Thread: [Any Batch "virus" makers/generators for Win7?](#)

ninen2001 - March 26, 2015, 7:57 am

Looking for a "virus" maker/generator that works with Windows 7. Want to learn some more batch and a virus maker/generator could help me with some things.

Shadow Reign - March 26, 2015, 8:00 am

Use Le search function! ? theres tons of them

rehab101 - March 26, 2015, 8:02 am

Batch "viruses" are not viruses, just bunch of commands put together for juvenile purposes. To answer your question, yes there are batch "virus" generators. Everyone here at BSDaCLI discourages their encouragement and use.

Well, I put virus as "virus". I have heard that they aren't really viruses but I can't really explain it in a different way.

I already did. Seems like most are really old and don't work correctly with windows 7.

annikk.exe - March 26, 2015, 9:46 am

None of the serious members are into that kind of thing. You might find some scripts but, as you say, they'll be low quality and may not even work.

We do generally discourage people from posting such things. May I ask where your interest stems from?

How about the term "malware", it encompasses exactly what you are referring to. Although malware written in batch is generally useless.

My interest for what?'

If you want to learn batch you can do so without the use of malware, all of the members in this section would be more than happy to welcome anyone willing to learn until malware is involved. Once that happens, no one here will offer any real help other than saying batch should NOT be

used for such purposes.

Who says I'm going to use it for malicious use? There are things I could use in those makers for legit files.

ale12386 - March 26, 2015, 10:39 pm

I think "tHs Virus Maker" will work. But please dont try anything with this. As I was taught, hack to learn, not learn to hack.

Just go through any of the stickied threads. You will learn much more than looking at V gens.

EDIT: 450th post. Yay.

'Palladium - March 27, 2015, 4:42 am

I'll upload a virus to your nan's computer.

No one ever said you were going to use it for malicious use, I was simply making a point.

annikk.exe - March 27, 2015, 5:50 am

Well it sure as shit isn't for educational purposes...

(Mar 27, 2015 05:50 AM)annikk.exe Wrote: [\[CITE\]](#) Well it sure as shit isn't for educational purposes... Well, believe whatever you want. There's no purpose in corrupting, damaging or removing files and Windows. Honestly, I just want a virus maker to check the code and see if there is anything that I could use in the future.

Azraelstear - March 28, 2015, 5:28 am

You can make "some sort of virus" with batch & base Windows apps (xcopy, reg.exe to add startup key...) so they could also spread to other drives.

But they are really clumsy and have very limited functionality.

But it's really worthless. You can do much better with something as simple as VBS.

You don't need malware for that, you can learn better functions from useful programs as opposed to malware.
