Thread: [Looking to create my own API booter.](#)

Wincest - March 26, 2015, 7:41 pm

This is in Beginner hacking for obvious reasons as well as the fact that I need a little bit of help that knowledgeable people will know. First of all, I am going off of a guide made by Nieeli.

So in the guide it says I either need an API or hosting. My questions are the following.

- Which is cheaper, of the two?
- What is the main difference between the two?
- Which will hit harder? (Only looking to use this to hit off small game servers and home connections)
- Does spoofing need to be enabled and why have I seen it referenced in previous guides?
- What are the advantages of having spoofing?

If anybody has either an API or server that is priced at a yearly rate then please add me on my skype: JihadCDXX, and we can talk. While setting this up are there any mistakes that I may make that are fairly common?

I appreciate the read,
~Wincest

Create Api Ddos Is FREE !

Create accounts and go to
Go to : [destroyhosting-com/Mserveur.php](#)

and Upload scripts on your server (download in [destroyhosting-com/Mserveur.php](#))
Run command Installation

```
chmod +x *  
apt-get install libpcap-dev  
apt-get install gcc-dev
```

add your serveur in "ajouté un serveur"

Its okay ? Go to : [destroyhosting-com/MyApi.php](#) for your api
