Not sure if this is even allowed but figured someone might be interested. I keep relisting this shit but no one seems to want it -
http://www.ebay.com/itm/201312036040?ssPageName=STRK:MESELX:IT&_trksid=p3984.m1558.l2649 . Works good n' all but doesn't come with the driver CD's. They can be easily found online though.

Would be interested if I didn't already have one.

There was no need to post this, wasn't there?

OT: How old is this tablet? (Asking because it doesn't look very good)

5 years or so, all works perfectly fine. It's actually a really bad picture and I was too lazy to even wipe it off before taking it.

Try posting here for more interest. You're selling it for ridiculously cheap though, may buy it myself.
