Thread: [Questions about the bought version of CyberGate](#)

hornyy - March 28, 2015, 10:38 am

Hello

i want to buy Current Private Version: v3.5.1.0 but i have some questions to useres who has bought this.

Does the update funktion wok ? at the free version it didn't work for me.

if i update my vics there is a report that explorer.exe doesn't work every restart of the system.

wchelper.dll detectet in the bought edition too ? How can i disable that or is this fixed in the new version ?

does the password stealer work fine in v3.5.1.0 ?

How often is updated Cybergate ?

Can i use the bought cybergate in different vms ?

I hope you can help me :)

Why don't you just contact the seller, either on [HF](#) or on [their site](#)?

Anyway, CyberGate and Solitude were discontinued... both were last updated more than 3 years ago. I wouldn't recommend buying either of them.

I know this isn't what you are asking, but you should use an updated Rat such as the ones listed below:

- Nano Core
- Imminent Monitor 3
- NetWire

hornyy - March 28, 2015, 11:55 am

I've tried the crack from Imminent Monitor 3 but the stealer doesn't work. I can't save any screen capture from desktop. and the license system is shit. if my licence got blocked the owner needs up to two weeks to endblock. What about my victims ? They're all gone. I want a rat that dont need .net. i cant inject the rat process into firefox.exe or something else.

First off let me start off by saying you are an idiot for using cracked Ratting software. Specially \$25

software. Anyways, injecting isn't always the best option but I see, anyways if you just look at all the Ratting Software Threads you'll be able to find a Native rat, I think BabyLon is native, but I don't use Native rats as I don't have a use for them so I won't be able to tell you how stable they are.

hornyy - March 28, 2015, 12:08 pm

I used the cracked one to test it work fine for me. I can buy this software but i would not want lose my victims. from Imment monitor i only hear: " my license is blocked" what about the Victims ? i can't afford it, that my victims get lost.

It is indeed.

A locked license doesn't mean that you permanently lose your connections, your clients won't stop trying to connect to your IP. Anyway, I still wouldn't recommend buying IM3, considering it has other issues as well.

Yes, but if the .exe is detectet and i can't update it they are gone. Or i've still access to my my victims ?

ninen2001 - March 28, 2015, 2:07 pm

You should not buy CyberGate. Old, unupdated RAT. Get something like NanoCore. Very stable and smooth video and audio feed with custom plugins made by users of NanoCore.
