Thread: [\[TuT\] How to hack Minecraft accounts, easy. \[NO PROXIES NEEDED\] \[NOOB FRIENDLY\] \[TuT\]](#)

NinjaEdits - March 29, 2015, 9:26 am

Hi guys, today i will show you how to hack minecraft accounts. this is gonna be very easy and NOOB friendly.

You will need:

Sentry MBA: <https://www.sendspace.com/file/I0r5lh>

And a combolist

Step #1

Download Sentry MBA

Once you have opened Sentry go to the settings tab and Load the Snapshot (you will need a Mc config that you can download[here](#)).

[img]<http://snag.gy/xaq9N.jpg>[/img]

Step #2

-Time to load some word/combo lists now!

- Click the LISTS tab and go to Wordlist, you can now load a .txt with your combolist. You can either load a word list & a password list, or a combolist. Combolist are in user:password format all in 1 file.

- Tip: Make sure you are using the correct format for the site you are trying to crack. For example Minecraft uses a Mojang e-mail so you have to find a combolist with the format of mail:pass

[img]<http://snag.gy/AyRt4.jpg>[/img]

Step #3

- Time to get cracking! Click the PROGRESSION tab at the bottom. Click the little green refresh button located in the top right corner to make sure you're using the combolist you just loaded and not an old one.

- Click start! If everything is set-up correct Sentry should start bruteforcing.

- An easy way to tell if it is actually working is to check under PERFORMANCE in the little box that pops up and make sure numbers are increasing under TESTED.

[img]<http://snag.gy/viqgs.jpg>[/img]

And now are you DONE! Now you've cracked some minecraft accounts.
i hope you will enjoy it! ?

You could include the official download link here, <http://sentinel.securibox.net/sentry.php>

Moon Rock - March 29, 2015, 10:54 am

It's looking good, what are the benefits to using Sentry MBA?

The link is clean.

I use Sentry 1.0 but 2.0 seems legit as well. ?

NinjaEdits - March 29, 2015, 11:21 am

The .rar is clean guys just believe me. don't mind my -6 rep.

Niccolò Machiavelli - March 29, 2015, 11:31 am

Not a good config at all, proxies were banned almost instantly

AnonymousPlayer - March 29, 2015, 11:33 am

This looks like a clean and good tutorial. Thanks for the share!

sorry just being cautious is that link hes posted 100% clean??

can someone please make a tutorial on how to brute force a email with @btinternet or any others
thx

can you please provide prood of this not having a rat in thanks

how would you do it to find 1 persons password
