Thread: [Scanned over 900+ sites in 4 days straight no admin page WTF?](#)

ComplexReZ - April 1, 2015, 4:04 am

Yeah im not lieing now i have go threw over 900 sites scanned in 4 days constantly at it and havent found a god damn thing what is it i do wrong is it the dorks? how can i find a page with admin login damn why is it so hard any advice please?

hahdbwoannniabs - April 1, 2015, 5:53 am

I'm not sure what you're asking but if you want admin logins why don't you just google "inurl:adminlogin.php"?

Find a page with admin login? I'm not following you at all, are you trying to get the login credentials for an admin login page? Or are you trying to find the admin page of a website using a scanner?

Make sure its not double slashing.

Example: <http://www.website.com/> <-- one slash at the end

In the dictionary text document of common admin pages..
commonadminpages.txt

single slash---> /admin.php

single slash---> /admin/login.php

Two single slashes make a double slash 1+1 = 2 // / + / = //

The url it attempts to navigate to for a page status code would be..

<http://www.website.com//admin.php>

<http://www.website.com//admin/login.php>

---Solution---

correct: <http://www.website.com>
incorrect: <http://www.website.com/>

ComplexReZ - April 1, 2015, 5:28 pm

What do you mean i need to put 1 slash for /admin

You are lost, Go and read more tutorials

Noobsticky - April 6, 2015, 1:21 am

How many websites do you think there are on the internet.

Th3PonyWizard - April 6, 2015, 1:35 am

Stop mass-scanning websites. Make your own targets.

Niko - April 6, 2015, 1:38 am

I Think there is $83000000 \times 0.08 =$ idk im bad at math, but there should be that equation amount of websites.
