Had a different cipher when I made the thread but got so many pms so I just changed it to this one.

It should work with every email provider, but hotmail is known to junk php mails.

I like puzzles.Beats the point since you already know what it's gonna equate to :P
Try this one instead if you like puzzles.

I'd like to crack that code myself (is this just an encryption that you put into a decryption tool for that form of encryption? from your instructions it seems like more than that) but am not sure how long it will take or if I can. May I have the link please? Thank you for sharing this.

Logs are from the people who visit ipg.php, not the email spoofer.
