Thread: [Inline quoting and code formatting.](#)

THeON3 - April 5, 2015, 1:07 pm

I don't know if this has been suggested before but I noticed that sometimes I want to quote someone or use the code formatting tool, inline with all my other text, rather than taking a new line every time, which makes the post look incredibly messy and hard to read. I think this would be a pretty useful feature, especially for small quotes, and code examples.

So, for example, instead of this:

Spoiler [\(Click to View\)](#)

You could have this:

Spoiler [\(Click to View\)](#)

What do you think of this? I think it would be pretty handy.

Or you can just use [code] because it's perfectly fine the way it is.

EDIT:

(Jul 30, 2010 02:15 PM)Omniscient Wrote: [\[CITE\]](#) The following suggestion types will be automatically denied and the thread locked.

4. Layout Suggestions. I control the design of this site. I don't want to know what you think is better.

Nachfolger - April 5, 2015, 2:55 pm

Personally, I'm not a fan of the suggested look. I think this gives it a bigger separation from the post.

Also, new looks to the site aren't allowed to be suggested.

Gustav. - April 5, 2015, 3:06 pm

Lol, is it really that big of a problem for you to go ahead and suggest an entire new look?

Bibikins - April 5, 2015, 3:10 pm

This thread should be locked because it's a layout suggestion which is not allowed.

Well, no, not really. It's not a problem either and I don't want to replace the current look, just thought it would be nice to add to it.

MyBB is kind of jacked. Their built-in MyCode you can't really edit without core file edits. Total pain

in the ass. I really don't plan to tinker with them.

Oh, sorry, I did not know that. I'll keep it in mind. I should be getting I33t soon so I'll lock it then.
