Thread: [Habbo name checker](#)

Brasil - April 6, 2015, 3:46 pm

I made a web script to automatically check if names are taken or not taken by another habbo hotel account. This is good if you want a short name (I think all the 3 letters are taken, but there are a lot of 4 letter names), or if you want to check against a list of names that you want; For example a dictionary.

If anyone is interested in having some names checked let me know.

I'll give a copy of the executable to HQ, Ub3r and L33t members for a price.

You can already find this for free on the forums and due to the fact they just changed the API again i dont think any of these types of tool will work.

Brasil - April 6, 2015, 11:10 pm

Actually I just finished the tool today so unless they changed the api a few hours ago then it does work.
