Hand check

Sigelei 100w plus with a Arctic .2 duel coil sub tank when I'm chillin and a original dark horse with dual twisted parallel claptons when I want to impress.

Juice atm

Homemade fairy shit (taste like it sounds)

Homemade coffee blend (this batch didn't turn out so good)

Mafia Princess by SMAX (so fucking good, you gotta get it)

what you got?

Grimace - April 7, 2015, 9:07 pm

Two setups

IPV Mini with subtank mini (sometimes use atlantis on it)

Panzer Clone with Dark Horse RDA

3x eFest 18650s

Currently Vaping on downside and upside by The Schwarz Eliquid (blueberry yogurt and strawberry yogurt)

?Fetz? - April 7, 2015, 9:07 pm

Pretty sure you will get more responses for this in the vice section. :D

Mine got moved there too, I feel like members who vape will all see anyways.

sick never heard of that juice before tho, might have to go on the look for it.

Innixion - April 7, 2015, 9:14 pm

Running dark horse on my Sigelei 150w with I think a dual 10 wrap 24g can't even remember right now I knows it's a .6 though. She's a chuckin' ;)

Spoiler ([Click to View](#))

im leaning toward the ipv3 because it has a user upgradable chip and they are coming out with a 180w update on it.

What's your input?

Innixion - April 7, 2015, 9:21 pm

What's your input? I really like mine, but what I'm not liking is going from parallel 26650's to series 18650's... Battrry life is extremely shitty from what I'm used to haha, on the IPV3 you can charge with a USB and the Sigelei you can't :/ I'd probably go with the IPV3.

Bibikins - April 7, 2015, 9:25 pm

What the fuck are you guys talking about?

Lonely - April 7, 2015, 9:27 pm

true true, that's why I always have a extra set of batteries on me at all times haha

but also I don't think the usb port is for charging tho, or at least very frowned upon because it has a chance of frying the chip.

ps how long does it take your coils to heat up? lmao 10 wraps must take hellas, good flavor tho.

I'd get neither for my next mod I was debating on those exact two but my mind has been changed. DNA 40 boards are crazy, they only go up to 40 w but you don't really need much more. And it has temperature control so you can vape on a temperature that you set it too with nickel wire. Look them up.

A few DNA 40 mods are

HCigar HB (most affordable)
Vaporshark rDNA 40
Hana Mods

Look it up you'll be impressed.

No one actually vapes at those high ass wattages, it's just a pissuing test between Chinese manufactures to see who can get more power.

I regularly vape at 100 watts lol, if I want to blow huge clouds then I crank it to 120-150, past 120-125 you can't really even tell the difference in wattage.

yeah I was also looking at the jelly fish mod it is a overpowered 53w box

saw a guy use it at a cloud comp one time he fucking destroyed the rest of the competition. I can get it online for like \$135 but in the stores around me its like \$150 - \$160

Grimace - April 7, 2015, 9:32 pm

Much to warm a vape for me, I normally puff at about 22-25 watts. Just my preference.

Invicta - April 7, 2015, 9:33 pm

Have an FM mod with a Haze RDA. I really like my setup.

Grimace - April 7, 2015, 9:33 pm

A friend of mine has the Jelly Fish mod, it's an all white box mix with a jellyfish on it. Kind of an ugly jelly fish on it but whatever.

some time, if you can, send me a vid of him chuckin some clouds.

On a different note, if you could have any RDA what would you get? Im hella stuck on what I should get.

Not really an RDA kinda guy cause I love not dripping every few puffs, but I've always wanted a derringer. They're really small and have excellent flavor. I do recommend the subtank mini too though it's a tank with a rebuildable deck.

Aquilaane - April 7, 2015, 9:43 pm

Have quite a few setups.

- Sigelei 150W with an Artic Sub tank with a .2 ohm coil
- Angelus Lapsus Mod with a Dark Horse rocking 2.4 mm 24g twisted parallels 6 wraps (.09 ohms)
- King Mod with a Tobh Atty with custom drill holes 24g 4 wraps on a 1/16th drill bit
- Vision Spinner 2 with a nautilus and kangertech aerotank

Lonely - April 7, 2015, 9:46 pm

see I was looking at the sub tanks and ended up choosing the Arctic because If I wanted to build on I would just build on my RDA but now Im kinda regretting my decision because these dual micro coils in here just aren't doing the flavor production or vapor production I want, guess Ill have to deal with it till I get a little extra cash to go get one with a rebuildable deck on it.

I am looking into the DNA 40 tho still kinda skeptical because its different than the mods I've been using for the past 4 years, also idk where to get it from, Ive never seen one in person. guess Ill look online for one, you got a site that sells them cheap or am I just gonna have to go with the actual website

What watts are you using the artic with? And I assume your using the .2 ohm coil? I've never had an issue with vapor production or flavor with it. It blows me away and is my daily vape.

I usually run about 70 watts. It's a little warmer than I'd prefer but the ease of a tank, the vapor production, and flavor are worth it.

VaporDNA sells a HCigar HB DNA 40 mod for 120 and if you use the promo code 'welcome10' it goes down to 107.

Sweet-Vapes sells the same one for 99 bucks but I cannot vouch for the site as I've never ordered from there like I have VaporDNA.

yeah it's the .2 ohm dual coil I run it at a steady 84 watts I guess I'm just used to my claptons heating up 2x as fast and producing more flavor and vapor. It still chucks, but just not what I'm used to.
