Thread: [>>>>FREE Habbo Name Checking Hack<<<<](#)

Brasil - April 8, 2015, 11:50 am

I made a perl script to automatically check names off a list to habbo.com.

[Video: <https://www.youtube.com/watch?v=pgSf4UWfaAI>]

FREE NAMES

If you want a list of untaken 4 letter names, or if you want a list of your own to be checked, you can contact me, and I'll probably do it for free.

Get the Executable or Source!

If you want a copy of the executable or source you can also send me a message, but you need to be a trusted member because I don't want this to get patched instantaneously.

The source is in perl

Old thread was [here](#), but I wanted to put in the video so I made a new one.

(Apr 8, 2015 02:26 PM)CashMoneyMedia Wrote: [\[CITE\]](#) Send me a copy of this perl script ill do a review of it for you.I'll hook you up with an exe file, as you probably don't know how to interpret the source properly with strawberry or active perl.

Hakuna Matata - April 8, 2015, 4:14 pm

You're doing it all wrong, tbh. =P

Send a POST request to <https://ex.habbo.com/new-user-reception/check-name> with the name you want to check.

Send a POST request to <https://ex.habbo.com/new-user-reception/check-name> with the name you want to check.oooh that is fancy and faster.

Nobody really has alot of interest in this though (exept for the guy who asked for it), so I'm kinda done with it.
