Thread: [how to install the VSE script?](#)

Infiny - April 8, 2015, 1:14 pm

i wanted to ask how do i install the VSE script?

i got the code from decafe but i dont know how to install it to my server. if someone could help that would be great

PLT ? - April 8, 2015, 1:46 pm

gcc vse.c -o -pthread vse

Make sure gcc is installed first. I think it uses pthread I'm not sure. I haven't looked at the script.

Decafe - April 8, 2015, 4:10 pm

You need a server with spoofing enabled. Once you have that, you can install the compiler and text editor.

Code yum install gcc vim

Once that is finished installing, create a file called "vse.c" by running this command.

Code vim vse.cCopy the VSE source code and right click in your terminal. Hit ESC then type ":wq" and hit enter.

Now, run the code to compile the script.

Code gcc -pthread vse.c -o vse

Type "./vse" and you will get the usage command.

Enter Down - April 8, 2015, 10:09 pm

share me please source script vse :) thank you

everything worked until the compile part.

When i do

Code gcc -pthread vse.c -o vse

im getting this error (im running debian 6.x and my server spoofes)

Code vse.c:1: error: expected '=', ',', ';', 'asm' or '__attribute__' before '<' token
In file included from /usr/include/stdlib.h:320,
from vse.c:5:
/usr/include/sys/types.h:34: error: expected '=', ',', ';', 'asm' or '__attribute__' before 'u_char'

<http://gyazo.com/1813d32928abefade9870dd7508a3efc>

nvm ive fixed it. i made a copy mistake

thanks for your help :D

just 1 more question. what for a throttle should i use to attack something?

At the start of the file, hit "i" and type "#i". Then hit ESC and type ":wq" and hit enter. Run the compiling command again.

Depends on the specs of your server. Generally 1-5 threads will down most source servers.
