If you read i tell you the exploits the coder has put in it, unlike the doc/pdf thoes you need to send to someone and have them open. For this all they have to do is visit the website and they have a chance of infection. This is a faster method if you have the ability to pull large traffic then you can see large loads.

LayersOSImodel - December 30, 2015, 8:40 am

why are you selling an exploit kit for 400\$ week when you're using only public CVE that will infect only ppl who dont have their flash or ... updated. 400\$ is too expensive... maybe im wrong i dont know, if its the real price should i post mine too ?

(Apr 30, 2016 10:01 AM)iNeed Sleep Wrote: [\[CITE\]](#) This is exactly what I would like to know aswell. Rig exploit kit does not include any free traffic, this is a bundle only, provide exploit and you provide traffic.

Rig have average knock of 50% on andromeda 2.10 and 60% on smoke bot (latest) for tier3 country traffic.

However when sending only windows xp it would seems to be lower as their shellcode does not work very well if the visitor does not have .net installed.

RIG is the less expensive and best pack for the money.

If you need traffic you can easily buy from site like adf.ly and make your own unique bot using rig ek.
