Hey.

I wanted to share with you guys a decent free webhosting.

This is much better than the rest of the free ones out there, even though the disk space isn't huge (but as long as you're not hosting files for download there it's fine).

***** DDoS Protection (All Layers) ***

10 Gbps Connection

1000GB Transfer

1 GB SSD Disk

Unlimited Domains (Domain is not included!)

Unlimited Subdomains

Unlimited Email Addresses

Unlimited MySQL Databases

Voxility Tunnel - 700Gbps DDoS Protection (Layer 4 + Layer 7)

How long does this last for though?

This is a lifetime service. So it will last until blazingfast decides to stop offering it (for everyone)

Sweet!

Heard their DDoS protection is good.

Thanks for the share.
