Thread: [\[Tutorial\] Build Your BotNet {WARBOT HTTP BotNet} Real Cpanel \[Tutorial\]](#)

xx 0x0 xx - April 10, 2015, 1:56 pm

Hello Hf Members i was searching for good Http Botnet tutorial but i didn't find a good full detailed one so i decided to make tutorial's to cover all Http BotNet installation and i started with "WarBot" BotNet it's good and easy to deal with, also it will contain Download Link but you can do it on your own risk i don't know if it's infected or not use it on VM or sand box for more safety

Note: i will not send the files anymore as it might be backdoored so please use ur own files this is just tutorials to make you know how this things work

What I will Cover !?

Installing WarBot Http BotNet Without Any Problems on Cpanel Accelerated .

will cover more and more soon

Is there any Video's describe this !?

yeh i found a lot of tutorials on youtube but still LQ tutorials with free Web-Hosting that make everything easy but don't give you what you are looking for

Are you going to make Video Tutorial instead of Pic's !?

atm no i cant cuz i have shitty connection but soon i will do this

Let's Start

First thing you have to do is get into Cpanel Accelerated you can pay for one or do what every you want to get it ?

log into your Cpanel Then Do these Steps

it will redirect you to public_html Like this Photo

okay Now Create New Folder Like This Pic : Click On New Folder >> Type The Name i will Call it "Smooth" >> Press on Create New Folder .

now Upload Your BotNet.zip to your Cpanel and extract it into Smooth Folder Like Mine :

Now Go To MySql DataBase

then make your Botnet Database Like this Pic :

then Add a User to a Database

now go to " phpmyadmin "

then open your database and Import Like Below and Click Brows and go to your WarBot Folder mine is "warbot\install" and chose " Schema.sql " and press Go :

We Done Now With Database Let's go to WarBot Files Again

now after you finished Database Go to Files you extracted and Copy This Path "
/Smooth/WarBot/warbot/install "

and take this path and put it after website name to became like this
www.xxx.com/Smooth/WarBot/warbot/install

you will see this page :

Notice : If you didn't Step By Step This tutorial you may get some errors Please Follow It As i Say

Notice : Dont Forget to Give Permissions to every Folder777

After Click on Install you will get this message " Installation is complete! "

great now Delete " Install Folder " and Open " www.xxx.com/Smooth/WarBot/warbot/ "

like this :

Congratz You Have Your WarBot installed

I hope you fined this tutorial good for you guys

i really dont know how to put Pic's at Spoiler So excuse me Please :)

and sorry for my bad grammer im working on it

Note: i will not send the files anymore as it might be backdoored so please use ur own files this is just tutorials to make you know how this things work

Best Regards

Some Side Notes: Warbot isn't really for DDoSing from what I've seen. I see this bot and it looks more if your into selling bots/zombies. As you can see the "Load" button enables you to install other peoples viruses on your bots quite easily, and will actually give you a username and password for the person buying your bots, to see if you've done it.(Temporary Login). I am not really sure about the Console yet, so if anyone has any info on it please do share.
