Thread: [\[HELP\] Teamspeak Problems on Linux Debian](#)

Powder - April 10, 2015, 2:10 pm

I want to log into my Teamspeak 3 server query, but I don't know the password anymore. Where can I find it ? BTW I got banned because I tried to many passwords at [this](#) Server Query Webinterface, how can I unban me ?

Well in your case you've got two options. If you have the ability to grant admin to other users, connect to the server using another teamspeak 3 identity and grant that account admin powers. Afterwards, using that newly assigned admin account go to settings and then ServerQuery Login. You should get a pop-up which will ask you for a Name and password. Then you can just use those credentials to login. The second option is simply well reinstall the server I guess.
