Thread: [\[Debian\]Questions about some packages](#)

AJ8126 - April 11, 2015, 10:09 pm

I'm looking for packages for the following things

- Easy Twitch.tv chat
 - Java/php coding suites
 - youtube client
 - A free photoshop variant
 - A Easy to use radio
 - A program to transmit radio into ts or other voip programs
- and a guide on how to add to keyring and setup a new source for stuff

Thanks guys I googled and couldn't find anything that was right but im new and this is basically all i need so I hope you guys understand.

Java/PHP can be coded in NetBeans or any IDE like Sublime text/Atom.

A free photoshop variant would be Gimp.

AJ8126 - April 12, 2015, 7:11 am

I'm sorry if I confused you guys im looking for the package names and if its not with default debian a source and how to add it.

Krew - April 12, 2015, 7:13 am

just add a repo, OP

```
nano /etc/apt/sources.list  
then add your repos
```

A free photoshop variant would be Gimp.Sublime and Atom are text editors, not an IDE.

(Apr 12, 2015 07:13 AM)Krew Wrote: [\[CITE\]](#) just add a repo, OP

nano /etc/apt/sources.list

then add your reposTo elaborate:

The Debian packages are contained in the repos, so you won't add any old repo.

The main ones are

PHP Code

<?php

deb http://ftp.de.debian.org/debian jessie main non-free

deb http://ftp.us.debian.org/debian/ testing main contrib non-free

deb http://ftp.debian.org/debian/ jessie-updates main contrib non-free

deb http://security.debian.org/ jessie/updates main contrib non-free

deb http://ftp.debian.org/debian/ jessie-backports main contrib non-free

(replace jessie with whatever version you're using)

Also adding a repository that doesn't belong to Debian is a bad idea.
