Thread: [C# FUD Crypter Stub](#)

n3ptune - April 12, 2015, 3:56 am

Can someone please help me make a C# Crypter stub?

My skype is : n3ptuneleak

Thanks!

Minimal. - April 12, 2015, 3:57 am

Uhm, if you can pay... Sure why not!

Add me on skype then mate and see what we can do.

Ravent - April 12, 2015, 4:14 am

Try out using some obfuscator, can help a lot.

Why would you use a third party software to FUD your stub. By doing it you are making false detections on legitimate software that uses obfuscators to protect their code.

You should stop doing that.

SKiDROW_ - April 19, 2015, 12:55 pm

your stub. By doing it you are making false detections on legitimate software that uses obfuscators to protect their code.

Excellent Point. Its easy to "FUD" a stub without using any Software just by rewriting your stub. Find a unique storage way , be creative . I would suggest to learn something about the PE-Format. There are so many crypter sources out there try to understand how a crypter works.

Ravent - April 20, 2015, 5:56 am

I simply meant that if you have no idea how to make a crypter you can start using some obfuscator to rename variables. Starting from there, then you just do it on your own because you will not get a single file undetectable with an obfuscator, it's just a good base to start if you have no knowledge.

English is not my main language, so excuse me if I didn't explain myself properly.

Zyklon A - April 20, 2015, 5:59 am

No, you explained it very nice but using obfuscators to fud your code is kind of a dick move.

Ravent - April 20, 2015, 6:01 am

I really Know it, is very unprofessional and just is for people starting to see how it works.

If you know that is unprofessional why do you suggest it. You should never say anything like that. Do you know how hard is to protect the legitimate software with obfuscators because of the false detections. It is pain in the ass for developers because skids use it to fud their malware.

I know many people have modded obfuscators and private protections so only the public obfuscators will be affected and also normally if you dont have an private or modded obfuscator you can found many autounpackers tools like with Confuser/ConfuserEx, Smart Assembly etc, i just recommend it cause he need to know how works all first and then he can try to do something resemblant.

Zyklon A - April 20, 2015, 6:25 am

I know that you are just trying to help, but please don't suggest that anymore.
