Thread: [Steam Stolen..](#)

Eminem????? ???? - April 12, 2015, 1:11 pm

Basically I just want someone to check me over. Steam got stolen last night so I need to make sure I'm not ratted. I still have his program but it's isolated.

Null Byte - April 12, 2015, 1:16 pm

Welcome to the malware removal forum! My name is Null Byte and I will be assisting you today.

Please download [Farbar Recovery Scan Tool](#) and save it to your Desktop.

Note: You need to run the version compatible with your system. If you are not sure which version applies to your system download both of them and try to run them. Only one of them will run on your system, that will be the right version.

Right click FRST to run as administrator (XP users click run after receipt of Windows Security Warning - Open File). When the tool opens click Yes to disclaimer.

Press Scan button.

It will produce a log called FRST.txt in the same directory the tool is run from.

Please copy and paste log to [Pastebin.com](#) and post the link here.

The first time the tool is run it generates another log (Addition.txt - also located in the same directory as FRST.exe/FRST64.exe). Please also paste that along with the FRST.txt into your reply.

From here on out please only take instructions from me.

Thanks. First one is the regular scan second is the additional.

obviouslyracist - April 12, 2015, 1:39 pm

Wow so nice to see the Browser stealers they have been using for CS GO skins on a log.

How did you get it? Was it through TS3 or what?

By the way can you send me the link to it, please.

Null Byte - April 12, 2015, 1:50 pm

Download this file (Right click > Save Link as): <http://a.pomf.se/rilgcq.txt>

Save it to the same directory as FRST, make sure it's named fixlist.txt (VERY IMPORTANT). Open FRST and click the "Fix" button only once. When FRST is done fixing it will produce a log named fixlog.txt, post that here.

WARNING: Save ALL work before running this fixlist, as it will close all open programs and may reboot your computer!

Sadly whatever that did just erased all my passwords etc..

obviouslyracist - April 13, 2015, 5:08 am

Do you need them or are you able to recover them through Forgot Password for each website?

Your Firefox profile, where Firefox stores your bookmarks, passwords and other user data, was deleted because of a User.js.

A user.js file is an alternative method of modifying preferences(think of about:config). Because user.js doesn't exist by default, he assumed the browser stealer added that.

Wait for Null Byte to help you though since he is one the fixing your problem.

Just trying to inform you so you are not in the dark for too long.

Knautschtabak - April 13, 2015, 12:04 pm

Anything you remove with FRST can be restored again. I am sure Null Byte will take care of that.

Tha Sneak - April 13, 2015, 4:06 pm

Pointless scans. Please do the following:

Download [OTL.exe](#) by OldTimer to your Desktop. Close all windows and double click OTL.exe.

Click Run Scan and let the program run uninterrupted.

It will produce two logs for you, one will pop up - OTL.txt, the other will be saved on your Desktop - Extras.txt. Post both logs in this thread.

You may need to use two posts to get it all.

Would you mind responding to my scan???

Tha Sneak - April 16, 2015, 11:03 am

Perform the following fix with FRST. Save the following codes as FixList.txt using Notepad.exe. You are asked not to use any other text editing software. (Exclude the word Code)

Code Start

RestoreQuarantine:

FF user.js: detected! =>

C:\Users\Austin\AppData\Roaming\Mozilla\Firefox\Profiles\j5sk7rnd.default\user.js [2014-05-16]

End

Make sure that FRST.exe and FixList.txt are in the same folder.

Re-run FRST.exe and click Fix.

A log will open after the completion of the fix.

Post the log in your reply.

Eminem????? ????? - April 16, 2015, 11:38 am

I'm just going to delete this thread, and make a new one. I have no idea who is really assisting me, and who isn't.
