Very nice tut toxic.

If you could hide the connections log and groups box in 1.05.1 I would use it :p

Yeah dued that would be a nice feature if johnhky could add that!

cybershot619 - June 13, 2010, 12:59 pm

hey, when ever i download cybergate and try to extract it or open it it just says file is corrupt and wont open. I disabled my AV and everything but it just wont let me open it

But my ISP wont allow port forwarding.
is there any other way besides changing ISP.

Nope you have to port forward.

th3hive - June 14, 2010, 3:15 pm

Okay, I did what you did and tested the server. Now how do I remove it from my computer?

Toxic Asshole - June 14, 2010, 3:19 pm

Your welcome man thanks for the rep.

HaXZX0r - June 15, 2010, 9:29 am

Wow, Cybergate V1.0.5 did not work for me at the beginning. I was in the RAT's crew so I know how to setup all kinds of RATs but Cybergate just didn't wanna work on my computer. AFTER watching your tut it worked perfectly for some reason...
Cheers for this one mate! :)
Great tutorial + a great guy!

eneakume - June 15, 2010, 9:45 am

what's the point of having the no-ip client open all its doing is taking your ram space. Cybergate already has the DynDns and no-ip clients built in so every time u wanna update u just click update.

Chill dude all i said is that there is no point of doing that so dont tell them to open the no-ip client since cybergate already has that stuff built in.

zoh - June 15, 2010, 1:54 pm

pretty good, thanks alot!

milkshake - June 18, 2010, 11:40 am

Nice tut' but plz how can i change icon? because an .exe with a jpeg icon is little bit suspect :p lol
I try with ResHacker but it didn't work...

Okazaki - June 18, 2010, 5:58 pm

@milk just when making server in-tick use icon :)

LOL Yeah dont forget that :D kk.

(Its optional)

Yossi - June 19, 2010, 9:34 am

I've went through your video guide step by step very carefully but I can't seem to get it working right on my Virtualbox OSE. I'm trying to do the test on myself like you did but every time, FAIL. I've tried unticking Virtualbox but it still isn't working. I am running ubuntu on my box with xp in virtualbox. Any help would be greatly appreciated.

I done everything but it doesn't work.

How do you port forward a Sagem Sky Broadband router, because it has no model number?

I assume you live in UK or somewhere near there.

Use Automatic Port Forwarder or w/e

mazing - June 29, 2010, 11:21 pm

Very nice and informative video tut. i really liked it. :D

Edit: I followed all the steps and was able to get it to work! thanks alot. i love you and will have your babies if i could.

Where to get a cybergate 1.0.5.1? I already searched the forum and I can't find a trusted one.

Karvane - June 30, 2010, 6:38 am

I runned the server.exe in my computer but i didnt pop up in the cybergate.
