Thread: [RAT with Remote Desktop and Webcam working 720/1080p 60 fps](#)

invisiblefingers - April 12, 2015, 8:41 pm

There's some RAT with Remote Desktop and Webcam features that works with 720/1080p and 60 fps? (View and control)

intoxication - April 12, 2015, 9:28 pm

That all completely depends on the clients hardware ...

If they have an old piece of shit webcam you obviously won't get 720p as an output no matter how hard you try; and you won't be able to control a webcam either (I'm assuming you mean movement and zoom etc?).

You are not necessarily limited by the software you're using as much as the hardware your client uses.

These speeds aren't even possible, unless if it's over LAN...

ninen2001 - April 12, 2015, 10:11 pm

As above said, that's pretty much impossible. Possibly if it's over LAN.

I want to use RATs Remote Desktop with a experience close to UltraVNC, TeamViewer, Remote FX or FreeRDP.

I have been wishing the same for quite a while to be honest. I use nanocore for it now but teamviewer is much faster on RD. It would be great to have a cheaper alternative to teamviewer & LMI Rescue as TV licenses cost 1000's...
