Thread: [Bypass Icloud Lock "Slide to unlock"](#)

xXxTheArtistxXx1 - April 13, 2015, 5:46 am

This is a new method to bypass the icloud lock. This method will allow you to create a home made server to bypass the icloud lock on your iphone, ipad or ipod touch.

Please note, this is not a permanent solution, you will not have carrier service, push notifications, and this is a tethered bypass (meaning you will have to redo this process every time you reboot) But the device can be jailbroken which can lead to a permanent solution.

Your device must be on the "Slide to unlock" style lockscreen and Not Hello/Hola/Bonjour/etc.

Looks like this:

What you need:

1. Download XAMPP <https://www.apachefriends.org/download.html>

2. Fiddler <http://www.majorgeeks.com/mg/get/fiddler,2.html>

3. Barney File

https://mega.co.nz/#!oB8DxaLC!UUnxWygON-9_0c7tIOXpRIeYChi-JpZmYY7fHhVW30s

Steps:

1. Install the programs above
2. Download the barney file and create the following directory -
C:/xampp/htdocs/deviceservices/buddy
3. Place the barney file in the folder created
4. Open Fiddler, and at the top press "Tools" and then "Fiddler Options"
5. Make it look like this
6. Edit your hosts file by adding this line: 127.0.0.1 static.ips.apple.com
7. Open XAMPP and Start Apache and then restart Fiddler
8. Open cmd (as admin) and type "ipconfig"
9. Look for the line that has your ipv4 adress. looks like this
10. On your device, press the home button and tap "More Wifi Settings" after connecting to WiFi
11. Scroll down to "HTTP Proxy" and tap "Manual"
12. Server is the IP address from step 9 and port is 8888
13. Tap "Back" then "Next"
14. Tap "Activation Help"

Your phone will then crash and respring into the home screen, and you have officially bypassed the icloud lock.

Notes: i do not own any of these tools or files i just uploaded them or gave you the official website's link
