Thread: [\[Crime.pw\] Amazing Tools || Proxy Scraper || EPIC Skype Resolver || IP 2 Skype & More](#)

AsunaHF - April 14, 2015, 12:35 pm

Crime.pw

Currently has these tools:

Proxy Scraper | Scrapes from very good urls.

Account Generator | Generate accounts! Free!

Advanced Epic Skype Resolver | Has ISP fetcher, Geo locator and more!

IP 2 Skype | Nothing Special

Screenshotter | Screenshots websites in full!

Email 2 Skype | Grabs the username that has been registered with the given email!

Domain 2 IP | Grabs any domains IP useful for DDoSing!

Coming Very Soon:

IP to Domain;

Whois Checker;

Website Up or Down Checker;

Fast As Fuck Pastebin Alternative;

URL Shortener;

Adfly, Adfox e.t.c URL Bypass;

Dictionary;

Email Validator;

IP Validator;

Phone Number Checker;

Translator;

Random Info Generator;

Stay tuned!

Reply below your opinions and any ideas on what to add!

alma143 - April 14, 2015, 12:54 pm

great web tools sir.....

waiting for updates....

AsunaHF - April 14, 2015, 1:06 pm

(Apr 14, 2015 12:54 PM)alma143 Wrote: [\[CITE\]](#) great web tools sir.....

Thank you dude I really appreciate it :D

cawthorn9 - April 14, 2015, 1:08 pm

cheers for this dude been looking for this

XxXThunderHaxXxX - April 14, 2015, 1:28 pm

Great tool! Looking to use this really soon...

AsunaHF - April 15, 2015, 6:14 am

Enjoy you two :D Updates later tonight!

Added the Email 2 Skype tool! Enjoy guys!

Added domain 2 ip tool! :D Blocked my website from being used on it lel

Bangerz - April 15, 2015, 12:44 pm

Its a great tool :)

O really like it :)

THanks dude! Check back more and more for updates :)

MELLOW. - April 15, 2015, 11:53 pm

I would not trust this, any trusted users out there want to test this?

UnfedZombieMC - April 16, 2015, 4:16 am

(Apr 15, 2015 11:53 PM)?ClockworkK Wrote: [\[CITE\]](#) I would not trust this, any trusted users out there want to test this?

Wow, Really? Go ahead and test it yourself, Its been running for like 1 month now and we have tons of anonymous users, The only things being logged is what usernames are being resolved and what domains are being resolved and what website is being screenshotted, and its appropriate date. There is 100% anonymity in my service.

Update: Planning on adding a Dashboard to check how many resolves and screenshots etc have been made.

AsunaHF - April 17, 2015, 9:08 am

Added the Navigation header to all the tools and also fixed the back end code making it more cleaner and indented!

IOSHackerr - April 17, 2015, 11:52 am

Can you add a virus total please would appreciate it

AsunaHF - April 17, 2015, 12:30 pm

(Apr 17, 2015 11:52 AM)IOSHackerr Wrote: [\[CITE\]](#) Can you add a virus total please would appreciate it

For a website? Your trippy m8 Why dont you just virustotal a link then.

Thanks dude :D I appreciate the vouch :D

wolfman010 - April 18, 2015, 12:05 pm

Great tools.You created some fine tools.One jealous noob here.Keep up the good work.

If I can pass along a request for additions, is in the proxy scraper, is to add 2 buttons. Export the list to Excel and one for Export to Word.Then have the capability to save the files to ones PC.

Another debatable button is a clear/refresh button

Thanx
bradnie

First suggestion well done! I can however add a button to save as a .txt file but I cannot make it export to Excel or Word. And there is no point in a 'Clear/refresh button' When there is a button Called 'Refresh Proxies' that does exactly what you need it will refresh the proxies deleting the old ones that were there before you clicked the refresh button. So it basically is a Refresh/Clear button already. I'll work on the Save button now.

Thanks for the suggestion :)

Thanks for the vouch dude! :D Enjoy more tools coming very soon!

Update: Improved the back-end code and made the whole file smaller in size and in line-count. I also moved all the javascript from the end of the Head tag to the end of the body tag so load-time will be improved.

I also fixed up the indenting and pointless line breaks also adding in a bit of <!-- Comments --> to help visualize some regions when i'm editing the files.

Since moving the javascript to the end of the body tag it has improved load time 41% :D

Update: Added ip to domain resolver! Enjoy guys :D 8 tools now :D

pap619 - April 19, 2015, 2:39 pm

Nice website, you should add proxy checker.

lil_weezy - April 19, 2015, 3:07 pm

This is really cool site vouch for you mate!

AsunaHF - April 19, 2015, 3:14 pm

(Apr 19, 2015 02:39 PM)pap619 Wrote: [\[CITE\]](#) Nice website, you should add proxy checker.

Its impossible to do such a thing in PHP, I have tried to the best of my ability to make one. And 2 guys pointed out to me on Skype that its just straight up impossible in PHP.

Otherwise I would have definitely added it already.

P.S. There is such thing as a Port Checker alright that checks if the port is open and working on the proxy/ip but that wont check if its working.

(Apr 19, 2015 03:07 PM)lil_weezy Wrote: [\[CITE\]](#) This is really cool site vouch for you mate!

Thanks dude I appreciate it alot :D Make sure you keep coming back to the site to see if there are any updates :D

Update: Added a public stats checker, It will show you all the stats about my site and it auto updates no waiting for me to update it manually its all updates itself, Learning up on how I can make the page use AJAX Polling to update the page automatically withouth having to refresh the page. But for now I suppose refreshing the page to see the updated stats is still pretty good :P

Update: Updated my most popular tool (Account Generator) and made it use modal boxes, Reason for this is because my site for some reason has issues scrolling and my only fix is editing tons of height and overflow variants and I just cant be bothered. So I made it from just printed strings into buttons that on click will open up a modal box showing 4 accounts of each type at one page load. If you want more than 4 just reload the page and click whatever account type again and it will change the accounts.

Will be making more account types soon!

1203 visitors in exactly 2 days since tracking stats :D AMazing thanks everyone!

UnrealApp - April 20, 2015, 8:16 pm

Nice job. Especially with the account cracker. Tried a few and worked fine. Hope to see different types in the future

yunghollow - April 20, 2015, 8:19 pm

Nice job man! Its good to see somebody sharing this amazing site for free.

OOOH I want to see if this works gimmie gimmie gimmie

AsunaHF - May 22, 2015, 10:27 am

(Apr 19, 2015 09:07 AM)RuSh3D Wrote: [\[CITE\]](#) Vouch ! the generator give working accounts, and the proxy scraper give a lot of working proxy ! (Y)

Finally back editing the site guys!

Thanks for the vouch!

(Apr 27, 2015 08:47 AM)The Sween Wrote: [\[CITE\]](#) Skype resolver doesn't work anymore. Just got back to editing the site the issue was the php being rendered with include() badly. Its fixed now and the site is much much more better in so many ways.

Huge Update Changelog:

We now use Include() to grab html and php on all the tools. This makes it much easier for me to add items to the menu, footer, edit the scraper or resolver php etc.

Found out that on 720p displays or below the buttons to download and scrape look fucking terrible. Replaced them with flat style buttons along with colour edit proper positioning, along with a padding edit on form tag making the inputs and buttons look really well fit in.

Fixed Skype Resolver and im fixing the rest now along with adding the Include() update to all the tools and pages (Could take awhile.)

Removed screenshotter tool due to immense inactivity compared to other tools like 12k uses a day on the generator and about 3 uses a week on the screenshotter :P That thing is useless :P

Added Minecraft Scraper! You can now scrape minecraft accounts in a click! Its just like the proxy scraper yet the minecraft scraper is faster and the majority of the accounts are working and checked hourly! Cant say where im scraping them from or even how there being scraped but just be happy unlimited minecraft accounts for all!

Removed stats counter, It was a terribly coded counter! Tried my best but it just wont go passed 1k. It always just resets back to 0.

Moved the Give Us Feedback//Head Back buttons from the left side of the page to the right so I can put the Crime.pw button which was on the right over to the left for optimal reasons.

Not all of these have been finished yet due to the main update Include() robbing most of my time lately along with my new 3ds and me getting back into Minecraft thats the main reasons ive not been updating the site was just having way too much fun!

Keep coming to the site even if its not working it will eventually get fixed and more stuff will be added!

Domain 2 IP Resolver has been fixed and renamed to Domain Resolver and has changed from crime.pw/tools/d2i to just /tools/d

There was issues with the new Minecraft Account Scraper, But its all fixed now and you can go ahead and use away. I had issues getting it to fix and remove duplicate lines but the problem all

along was a corrupt php.ini. I also couldn't get the buttons to go to the correct links without using submit and basic onclick javascript.

Update:

Since those errors I now use AJAX for scraping, refreshing (Partially), and downloading on the Minecraft Scraper and btw I'm shocked how much it's being used :D

The scrape button now scrapes 4 times faster from AJAX and doesn't bring you to another page it stays on the Scrapers page allowing you to just click the refresh button after about 5 - 10 seconds for new accounts to roll in. The refreshing is partially finished as I'm hoping to get it to auto refresh every 1 second when someone's on the page so that it will be easy for you to get the accounts without the need to wait 5 - 10 seconds and clicking refresh. And the download also doesn't bring you to another page neither does the refresh button! It just downloads on the spot and I finally changed the download name from accountsnodup.txt to Minecraft Accounts.txt

The minecraft scraper is now linked to the Include() update and now I can update everything quicker!

AsunaHF - May 23, 2015, 3:12 pm

No longer need to click the refresh button to update everything on the Minecraft Account Scraper. It now automatically refreshes every 1 second.

Hinch - May 23, 2015, 3:53 pm

thanks for the update it's great

AsunaHF - May 23, 2015, 4:28 pm

(May 23, 2015 03:53 PM)Lisa Ann. Wrote: [\[CITE\]](#) thanks for the update it's great
No problem!

The index finally is included in the Include() update.

Barthezz - May 23, 2015, 4:32 pm

Nice tools, will be using it!

AsunaHF - May 23, 2015, 5:07 pm

Completely removed account generator due to its inactiveness and supply vs. demand problem on origin and netflix.

(May 23, 2015 04:32 PM)Barthezz Wrote: [\[CITE\]](#) Nice tools, will be using it!
Cool dude! Enjoy ?

Fixed IP to Domain! The problem was a old faulty Include() tag from back 1 month ago :/

Re-fixed skype resolver forgot completely about fixing the 2nd needed php file for it until now sorry guys!

Fixed IP to Skype! Working on getting the avatar to show when more than 1 username is resolved

IP to Skype now will show the avatar of the first result only and same with the avatars add link.

All tools are now fixed! Last thing to do from the top of my head is bring Proxy Scraper into the Include() update!

Updated the proxy scraper to the new theme and added it to the Include() update!

Everything should now be fixed and up to date. If anything stops working (It shouldnt ever.) but if it does tell me please.

Added a Minecraft Username Checker. Its in beta and currently all you can do is click buttons which have pre-set usernames.
Im adding a input box and stuff soon.

The Minecraft Username checker now allows custom username checks and mass aswell!
It also now has the username form in the r.php (Output Page) aswell so you can easily recheck!

Soon I am going to have it check if the username will be available at some point if the original owner has renamed his account.
Its also not 100% spot on when checking if its available it will onyl say its available IF the username was never ever taken before not even renamed away. It must be 100% unused.
I will soon fix that!

The Minecraft Username Checker now says if its unavailable, Available, Will be available at x time pm/am UTC +0

?Genocide(X) - May 24, 2015, 4:28 pm
Domain2ip is not working bub

aeroh - May 24, 2015, 5:32 pm
nice hopefully it works fine

AsunaHF - May 25, 2015, 11:56 am
(May 24, 2015 04:28 PM)Pincerz12 Wrote: [\[CITE\]](#) Domain2ip is not working bub
All this time the menu directed you to /tools/d2i and forgot that I changed the domain resolvers link to /tools/d fixed!

(May 24, 2015 05:32 PM)aeroh Wrote: [\[CITE\]](#) nice hopefully it works fine
Enjoy dude! Hope it works fine for you!

If anyone has any suggestions for additions, changes or updates e.t.c please let me know ive hit a Creativity Block :/

AsunaHF - May 28, 2015, 12:41 pm
Added a new tool!

Adfly bypasser!
This tool bypasses any monetized url shortening service urls like Adfly Coinurl e.t.c and even more!

Changed the Proxy Scrapers directory from /tools/s to /tools/p for common sense and so I can change the skype resolver to /tools/s

Site is down for the first ever time in 1 year :O Getting it sorted out!

Fixed the issue, It was a bit of cloudflare issue with Development mode being on.

Gave the proxy scraper a heavy update! You can now scrape any url you want just by typing it in and clicking scrape! If you wish to use the urls I had set before this update just click on 'Click here' under the proxies and it will bring you to a link where you can share your proxy sharing site so

others can scrape from it and also all the urls I have used before hand. I have listed the 52 urls I was using in best (At the top) to the worst (At the bottom).

Changed the Skype Resolvers directory from /tools/r to /tools/s for common sense.

Fixed the error with cron job not deleting the scraped proxies every 1 hour from me changing the proxy scrapers directory.

Faiez - May 29, 2015, 9:36 am

The website has awesome tools!

AsunaHF - May 29, 2015, 9:43 am

IMPORTANT! - SSL doesn't work! Please try and access my site by going to http : // not https : // ... Cloudflare is currently working on this issue.

(May 29, 2015 09:36 AM)Faiez Wrote: [\[CITE\]](#) The website has awesome tools! Enjoy dude! Hope they work alright for you!

Jason Stattham - May 29, 2015, 9:47 am

Nice i guess. [FUCKING 25 CHARACTERS]

Comedic - May 29, 2015, 9:49 am

Seems like a very neat site, thanks for the share :)

AsunaHF - May 29, 2015, 9:49 am

Currently the scroll issue is fixed on:

Minecraft Scraper;

Minecraft Username Checker;

Proxy Scraper;

Adf.ly Bypasser;

I will fix it on the rest!

(May 29, 2015 09:47 AM)Haxz0r Wrote: [\[CITE\]](#) Nice i guess. [FUCKING 25 CHARACTERS] Thanks dude! [FUCKING 25 CHARACTERS]

(May 29, 2015 09:49 AM)Comedic Wrote: [\[CITE\]](#) Seems like a very neat site, thanks for the share :) Yeah im the type of website Control Freak who just loves a good neat, Flat style website :D Enjoy the tools! Plenty more tools are coming!

The scroll issue is now fixed on all tools!

Adding adblocker detection, And may end up getting it to ban you from the site if it detects adblock! But I wont do that until I get your guys opinion on it.

Putting it at that yeah it would suck for anyone new to go to the site with adbock on and get instabanned its kinda stupid when you think of it

AsunaHF - May 30, 2015, 10:03 am

Huge Update!

You are now 100% secure with our https :// support! Soon I will be updating all pages to automatically redirect you to https :// if you load http :// (Non-SSL).

This will now secure you with COMODO - SSL!

Currently fixing all files not loading due to them being loaded in http terminaton over https.

Crime.pw now uses SSL everywhere no matter what. This makes the pages much more secure!
Thanks Cloudflare!

I have brought back the Preset proxy scraper due to so many pms I got from people requesting it back and arguing at me saying I made a shitty mistake and ruined the scraper :/

Changed up the menu a small bti moving all the scrapers into a seperate table on the menu.

Added a highly requested download button to the custom Proxy Scraper :)
Thanks everyone for requesting some stuff and continue to request!

Not sure if its just me but whenever I load the Custom Proxy Scraper it lags the hell out of the window. Pretty sure whats causing this is the huge 133k+ file loaded to memory to count the amount of proxies for the output footer. I have made it delete the scraped proxies every hour.

If theres anythign you guys want to point out, comment on, request, ask to be changed, modified or removed or any type of feedback even if its like a 2 word comment please tell me, I want my site as user-friendly as possible!

Nipsey Hussle - May 31, 2015, 3:49 pm

Tools work great love the proxy scraper!

AsunaHF - May 31, 2015, 5:35 pm

(May 31, 2015 03:49 PM)Nipsey Hussle Wrote: [\[CITE\]](#) Tools work great love the proxy scraper!
Thanks for the feedback dude! Enjoy!

Update:

Starting working on an API, most likely it will be free but i'm not certain. So far I have a un-released tool (Minecraft Migrated Account Checker) its unreleased because it isn't correct all the time sicne theres no official Mojang API to check. Its simply checking if the username has ever been name changed if it has been name changed then it will output false on the API so when it outputs false on your program or website tool you can get it to ignore all False outputs and only log all trues. Trues will only show up if the username has never been name changed meaning its either, The current owners username, The owners first username and most likely could mean the username isnt even a Mojang account. But since you cant verify it 100% I wont be releasing it as a webtool unless its highly requested. But this really does lower your combolist so its easier to crack.

Update:

I have added the Minecraft Username Checker to the API and currently the public webtool is being powered from the API perfectly! In fact from using the API it allowed me to remove most of the now-useless php.

Update:

I have added the Adfly Bypasser to the API and currently the public webtool is being powered from the API perfectly! In fact from using the API it allowed me to remove most of the now-useless php.

Update:

I was having issues with the Adfly Bypasser and its PHP but its fully sorted now.

I have thought long and hard and the FREE API will only be given access to people who ask for it by skyping me: Crime.pw is my skype.

HUGE UPDATE:

Working on a Netflix Account checker (Web based of course)!

Update having issues getting the Netflix Checker to basically check if its logged in. I tried if statements on both strpos and regex and no luck. I'll update more later.

Update:

I have fixed the Netflix Checker but its not 100% finished all I have left to do is make a download for all working accounts and a way to load a combolist instead of manually checking 1 by 1.

TheMatrixLP - June 1, 2015, 1:04 pm

Best Site ev3r <3

It has a lot tools like Minecraft Skraper and IP to Skype :D

AsunaHF - June 1, 2015, 1:27 pm

(Jun 1, 2015 01:04 PM)TheMatrixLP Wrote: [\[CITE\]](#) Best Site ev3r <3

It has a lot tools like Minecraft Skraper and IP to Skype :D

Enjoy dude! Hope it works fine for ya!

HUGE NOTICE:

All tools or atleast most of them wont work for awhile im editing the backend code to the point where its not even being accessed by the tools. Some tools liek the scrapers will still work.

Introducing the new API! It is much faster and uses less PHP then ever before! Go to <https://crime.pw/tools/api/> to find out more information on it and to check how to use it. Do not add me or even message me asking for help coding the page you first go to should explain everything and if you really knew code you will know how to easily implement my API into your program.

The API is now fully functional had to work on it awellago for about 20-30 minutes due to issues with too many redirections but it works perfect now.

Update:

API now doesnt use any password algorithm! Enjoy using the API for free! Documentation on how to use it will be show at: <https://crime.pw/tools/api/> at some point later today or tomorow.

Also fixed the Adfly Bypasser.

Improved Adfly Bypassers backend code!

AsunaHF - June 2, 2015, 2:04 pm

Fixed the Minecraft Username Checker and improved the code, Fixed the Domain Resolver and improved the code.

Fixed the Email to Skype Resolver and improved the code.

New UI Update:

<https://gyazo.com/625b9dd297cfd4109d045c4bac3eedb1> ;

This will be rolling out to all the tools eventually. For now it will be in all the tools I have fixed today.

Guys please give me response on the UI edit. Do you like it? Should I edit the font? Change the

text? Reply :)

Having really screwed up resource errors...

Learner Boy - June 3, 2015, 10:20 pm

Thanks a lot for this mate

AsunaHF - June 3, 2015, 11:00 pm

(Jun 3, 2015 10:20 PM)Learner Boy Wrote: [\[CITE\]](#) Thanks a lot for this mate

No problem dude! Enjoy the tools! Some may not work properly for the time being.

XXDeguelloXx - June 8, 2015, 9:39 am

Looks like a pretty interesting tool.. Thought whenever I log on to use it, it says you're editing the code :P Hope to try it out soon.

XxSlenderManXxWatchYoBack - June 8, 2015, 5:24 pm

Great web tools bro It looks really clean

AsunaHF - June 9, 2015, 6:57 am

Guys, The website wont be edited at all for the next week ish. Currently doing my Junior Certificate and its tiring me the fuck out.

AsunaHF - June 13, 2015, 10:25 am

The last day of the Junior Certificate is tomorrow. I have found out that my site has been down for the last 4-5 days if not more. I am resolving this now and will possibly be editing some code.

SSL has been disabled due to issues with it working. No idea why.

SSL did almost fuck all anyway so no worries.

I am doing a mass edit. The site will be kinda un accessible until further notice.

Added ?url=variable support;

Its now easier to get to tools by just typing: <http://crime.pw>?tool=proxyscraper just append ?tool= at the end of the homepage followed by the tool name.

Fixed the menu's urls to use http:// instead of SSL and I have adapted the new ?url=variable support to the menu's urls.

Fully edited Index.php and edit.php;

Removed about 8 useless folders along with its nested folders;

Removed test files and old files I no longer need;

Moved a few files I use in a lot of pages using include() from the root directory to /ui for synthetics and a cleaner looking root directory.

*Note: Because I moved the files which are files like the menu's html e.t.c almost every tool page looks completely broken. Please be patient.

This is what the new tool pages will look like as of what I have planned,

<https://gyazo.com/e99e3780ab39eac68730e76e275a5813>

It used to be this big blob with a useless Massive rectangle for showing output, It was terrible and used file_put_content and just reopened it instead of using echo()

You can no longer go directly to the output page making weird errors like blank results causing stupid and annoying line breaks.

It now redirects you back to where you enter in your username, url or scrape button etc.

Updated my API for the Minecraft Username Checker, it is now fixed and tells you when its taken, available, or becoming available.

Updated Domain Resolver, it now only gives out the IP like it should. I'll create a GEOIP checker at a later date.

While editing, fixing and updating all the tools ill be removing the text "Asuna's" from the title and headers.

Email to Skype resolver is now fixed.

Updated Minecraft Account Scraper heavily, It now shows the loading icon in all browsers and will reload the page when its done scraping;

Removed the auto refresh feature due to Cloudflare disabling it from working :/ ffs....;

Removed all AJAX making the pages even faster now;

Removed a lot of files not needed anymore;

Removed all nesting files and folders for a cleaner mockup.

The Domain Resolver now does something when you try and resolve my site (Crime.pw duh)... Go try it out :P

<http://crime.pw?tool=domainresolver>

Loving the spam on the netflix account checker! Thanks guys :3

<https://gyazo.com/0a844e8eae8ec31ad2a6bb5d6ca53c2a>

Dw guys the spam will be sorted very soon :D

Netflix Account Checker no longer saves logs just like the update I made to all the other tools it just outputs the result.

This sorts out the spam issue.

After I sort out all the programs get them fixed e.t.c I will try and finally get it to check a whole combolist.

Some of the tools werent working cause the result tab was set to load from a output.txt file and show it and stupidly I forgot with the same result tab file I ahd it set to load \$page for some of the tools. I set it back to load \$page and i'm making a second result tab file to load output.txt for other tools. SO far the only tool affected by this after reverting it to use \$page is the netflix checker which basically renders the login page on my site. This is being fixed right now.

The IP to Skype Resolver is down and no ETA when it will be back online sorry :(

Fixed the Netflix Account Checker. Also not sure why for a blank second it blocks and hides the email, I have nothing coded at all to do this its very odd. But atleast its only for a miner milisecond.

AsunaHF - June 14, 2015, 10:42 am

The Proxy Scraper was always workign but now its updated and works better;

It no longer shows the scraped proxies publicly allowing you to scrape from private sites, paid sites or whatever;

You can no longer scrape a site formatted with spam like an IP for example:

Checkout.Me.On.Twitter.@Bla, it no longer checks for numbers it will only scrape it if there is numbers like 127.0.0.1;

It no longer saves everyones scraped proxies into one file it may look like it does since its the same file each scrape but its not everyones scraped proxies only stay until the scrape session is exited.

I'll be fixing up the preset proxy scraper very soon.

All tools from Adfly Bypasser to Custom Proxy Scraper now has integrated with the notification system.

Thief. - June 14, 2015, 10:49 am

IP to Domain;
Whois Checker;
Website Up or Down Checker;
Fast As Fuck Pastebin Alernative;
URL Shortener;
Adfly, Adfox e.t.c URL Bypass;
Dictionary;
Email Validator;
IP Validator;
Phone Number Checker;
Translator;
Random Info Generator;

They're all just c99's API's.

AsunaHF - June 14, 2015, 11:02 am

Preset proxy scraper is now fixed. Updated it a little bit but not much at all.

The Netflix Account Checker wont be functional for a while. I'm editing the code and trying to get it to load combolists.

(Jun 14, 2015 10:49 AM)Thief. Wrote: [\[CITE\]](#) IP to Domain;

Whois Checker;
Website Up or Down Checker;
Fast As Fuck Pastebin Alernative;
URL Shortener;
Adfly, Adfox e.t.c URL Bypass;
Dictionary;
Email Validator;
IP Validator;
Phone Number Checker;
Translator;
Random Info Generator;

They're all just c99's API's.

Ik, SOME of my tools use C99's API's mostly the skype/ip related tools all the rest coded myself.

Update:

The Netflix Account Checker now uses a textarea box allowing you to put email:pass into it and check it. Do note I havent yet coded it to check more than 1 email:pass so putting 2+ email:pass's into the box will just try doing EmailEmail:PassPass e.t.c; Please be patient while I code it to check email:pass's seperate and check all of them. Please note putting huge amounts of email:pass like

50k of em will take almost forever to complete and because of byte exhaustion ill probably limit it to about 10-20k a check.

IP to Skype has somehow duplicated and overwritten all the IP to Skype files with the SKype Resolver files. Fixing soon!

Fixed the Skype Resolver page, It was never outputting a response.

All tools are fixed apart from the IP to Skype which just doesnt work at the moment.

I have now opened up the home page and removed the notification you are now free to use my tools! :D

AsunaHF - June 15, 2015, 7:29 pm

The Netflix Account Checker now allows you to use a huge unlimited size combolist with more then 1 email:pass. It's fully working but do note that after a few uses our site does get IP blocked and theres not much we can do about it at all. When this happens even if your combos are working it will just ouput saying they are all invalid but no worries I made a automated checker to see if we are IP blocked it will say 'Currently IP Blocked, Please Try Again Later.' when we are IP blocked and it will say 'Up And Working!' When our service is ready for use.

Unfortunetely due to _POST e.t.c I wont be able to continue the API for the Netflix Account Checker.

The Status Checker, checks automatically every 1 hour. Tested by manually opening the cron job file and it seems to work splendidly, Also From what I tested it seems like it will IP ban you for about 45 mins to 1 hour which isnt bad.

AsunaHF - June 17, 2015, 4:47 pm

Added:

Minecraft Account Checker! Finally you guys can stop fucking skypeing me every 2 minutes saying the minecraft alt scraper doesnt work it does but the accounts on the undisclosed area of the internet its scraping from just doesnt seem to update and recheck all there alts ass frequently anymore. Go to the scraper grab the alts and go ahead and check them on the Minecraft Account Checker.

Added a notification about the checker in the Minecraft Scraper Page.

The Minecraft Account Scraper now scrapes double the amount of accounts in one scrape then it used to before. It now scrapes up to 26 accounts including removed duplicates.

Updated the duplicate remover to upgrade load time, It no longer saves the output to a file, reopens it, checks for duplicates, output only unique accounts anymore. All it does now is check in the array if the account is already in the array (Made it so the accounts go into a junk array) if its already in the array then its a duplicate. It then outputs all non-duplicates into only 1 txt file instead of how it used to go into 2 before this update.

The Minecraft Account Checker now auto-checks for its status when you load the page.

Blatz - June 17, 2015, 7:39 pm

Would love to have link thanks man.

AsunaHF - June 19, 2015, 12:12 am

(Jun 17, 2015 07:39 PM)Blatz Wrote: [\[CITE\]](#) Would love to have link thanks man.
The link is in the title of the thread m8 lel <http://crime.pw>

Beeping - June 19, 2015, 12:14 am

Is the site offline? can't seem to get on.

Nope, got on.
Thanks for the site :)

AsunaHF - June 21, 2015, 9:12 am

The site is having issues loading sorting it out.

AsunaHF - June 24, 2015, 8:07 am

They were sorted forgot to post about it.

myoptare - June 25, 2015, 2:52 pm

Great tool! Looking to use this really soon...

Actually idk if my pc glitched but can u pm me the download link please i cant find it thnks

AsunaHF - June 26, 2015, 6:10 am

(Jun 25, 2015 02:52 PM)myoptare Wrote: [\[CITE\]](#) Great tool! Looking to use this really soon...

Its not a download, Its a website it says it in the title of this thread ? Crime.pw

Update:

All of a sudden the menu on the top left on specifically the home page is acting a bit glitch as when you hover over the sandwich icon (3 rectangles stacked) it slides in from the left all the tools but when you try hover over it to open it and see the names of the tools it for some reason goes away and slides back to the left. This is odd as it uses the exact same code as all the other pages yet only the homepage is having this error. To get a fix while you wait for me to universally fix it just click the sandwich icon instead of just hovering over it and all should be good.

A majority of links in the menu werent working for about 2 weeks :(sorry only noticed now. Fixed them.

AsunaHF - June 29, 2015, 7:50 pm

Amazing Update!!!!!!

We now have a search bar! At the moment it doesn't contain any links or search results for any Tools but I will be adding them very soon stay tuned!

Should I replace the Slide In Part of the menu with this new search bar?

It now searches for tools, The only tool added to the search results is the Adfly Bypasser. Please be patient while I try get the search bar to be fixed in the tool pages. For some reason it doesnt work when its on a tool page.

Sorted up a lot of the code and now the searchbar searches for different type of stuff on different urls. I have a project coming up which was the main reason I was making this. The search bar is 100% needed for this project. Dont worry its going to be 100% as usual and ofc anonymous, No signing up, No IP logs!

I have separated the search bar databases from the current part of the site (Tools) away from the

Database for the in the works part of the site. This makes it much faster to search almost instant now and increases page load time but not by much.

I have now added all the tools to the search engine! Go try it out! <http://crime.pw> :)

The Search Box no longer shows <a> tag onclick bs stuff it now just says the Result you clicked on.

The searchbars CSS is now heavily updated fitting the sites theme a lot more!

Please help me decide if I should just completely remove the slide in menu and just replace it with like contact me links e.t.c and then have the search bar as the tool searcher.

AsunaHF - June 30, 2015, 9:29 pm

There wont be much updates to the main majority of the site you guys have access to for awhile until I finish this new project. Also to tie with this project it will be using a image grabber and a IMDB scraper, Lets see if you can figure out what im making, and no its not a movie/tv show watching site.

Auxil - June 30, 2015, 9:33 pm

Does your Netflix checker not work?

I really like the site though. The theme looks familiar, but it does look nice.

AsunaHF - July 1, 2015, 7:49 am

(Jun 30, 2015 09:33 PM)Auxil Wrote: [\[CITE\]](#) Does your Netflix checker not work?

I really like the site though. The theme looks familiar, but it does look nice.

The netflix account checker kind of works, like if its used too much then the site will get ip banned for 1 hour so it might be removed in a later date.

Site has been ddos'd by the fag superflim on skype, He was disappointed with his shitty head thinking the minecraft scraper buys you an account and then decided to ddos my site. Site hopefully will be back up soon but please ddos this fag or something.

NalaManbreh - July 1, 2015, 3:41 pm

this looks amazing bro hope this gets big and most used website!

AsunaHF - July 4, 2015, 6:51 am

(Jul 1, 2015 03:41 PM)NalaManbreh Wrote: [\[CITE\]](#) this looks amazing bro hope this gets big and most used website!

I hope so too :P Hope you enjoy the site, Im renewing it on the 10th for another year :)

Update:

There wont be any new updates related to the portion of the site you guys can see and use for awhile as im mainly working on a 2nd portion of the site. Also a IMDB API will be up soon!

Guys, My site currently looks absolute shite on phones, Please use a PC browser.

l0m1s - July 5, 2015, 1:11 pm

ill pm you bro for the resolver thanks alot

rm8sNeutra - July 7, 2015, 9:16 am

thank you man , thank you man

sanq - July 8, 2015, 4:01 am

Crime.pw

Currently has these tools:

Proxy Scraper | Scrapes from very good urls.

Account Generator | Generate accounts! Free!

Advanced Epic Skype Resolver | Has ISP fetcher, Geo locator and more!

IP 2 Skype | Nothing Special

Screenshotter | Screenshots websites in full!

Email 2 Skype | Grabs the username that has been registered with the given email!

Domain 2 IP | Grabs any domains IP useful for DDoSing!

Coming Very Soon:

IP to Domain;

Whois Checker;

Website Up or Down Checker;

Fast As Fuck Pastebin Alernative;

URL Shortener;

Adfly, Adfox e.t.c URL Bypass;

Dictionary;

Email Validator;

IP Validator;

Phone Number Checker;

Translator;

Random Info Generator;

Stay tuned!

Reply below your opinions and any ideas on what to add!

hai can i have the tools please thank you very much already

ramiking - July 18, 2015, 1:41 pm

Fazzix90 - August 20, 2015, 3:17 pm

Are you selling skype resolver api by any chance ?

XxTheHackerxX - August 23, 2015, 6:18 pm

Just what I needed, especially the proxy scraper. Nice!

Hinch - August 23, 2015, 6:21 pm

All I will say is change design 1 task bar == too clutterd

ShinyMagikarp - August 24, 2015, 2:21 am

Im back to coding, Decided to take a 2 month break to play some Minecraft when I was free. Back now and will hopefully be back for a good while. The section 2 I was working on before I took a break is now public but is in development stage. Check it out: crime.pw/torrents

Please if you find any vulnerabilities, bugs, errors, slow-loads, blank pages, incorrect looking pages or anything else out of the ordinary please post it here on the thread. If its a huge error and has a big vulnerability like SQLi, XSS, MitM e.t.c please skype me instead: crime.pw

My inspiration for the torrent section is from the site: YTS.to which uploads torrents for only movies so I decided to make my own version which only uploads torrents for TV Shows. The design is only a bit similar using some of the same CSS and Icons but the design isn't final I change it here and there. I would say the homepage of the torrent section is pretty much finished doe. The TVshow.php section where you are meant to be able to view information about a tv show and download the torrents for it isn't even close to the design I have in mind.

Forgot to mention, Due to my old account's Gmail being keylogged and auto-forwarded I cant recover my Asuna account. If anyone can help that would be great. But for now this is my new account.

(Aug 23, 2015 06:21 PM)Hinch Wrote: [\[CITE\]](#) All I will say is change design 1 task bar == too clutterd

Are you on about the Torrent sections design or what? Can you link me the page and screenshot what you think is cluttered?

Update:

The "Request TV Show" is now fully automated, Secretly in a hidden input tag it autograbs the IMDB ID of whatever show your trying to request. Which allows my script to autograb the IMDB Poster Image.

When you request a tv show it will automatically put it in the "TV Show Requests" section. In order of Oldest Request - Newest Request (Left - Right) This might change to show the newest requests first but for now it will stay like this. When more then 4 requests are open it will make a "Browse More" link popup on the right of the "TV Show Requests" text automatically. I havent setup the browse more page yet so thats in the works.

Update:

Got most of the design covered. Just setting up the download links to make it automated. This is gonna be the hardest bit o.o

Update:

Finally got the downloads section coded up and optimized. The only downside is it isn't super easy to add the links but ehh whatever. So now instead of having like 20 buttons to download a full season by torrent you now have technically one button to download every episode seperately on all

seasons :D

Update:

Decided that im going to just upload the tv shows to MEGA e.t.c instead of just linking to torrents. Because of this im probably going to change it from crime.pw/torrents to crime.pw/tv. The reason for doing this is because theres almost no torrents out there working anymore for the first couple of episodes to even seasons out there anymore forcing me to have to upload the MP4/MKV to MEGA or some other file sharing site and from there linking it to my site.

This change will take quite a bit to do process so if anything looks wrong for a bit don't comment on it please.

MoonKnight_ - August 25, 2015, 3:49 am

GG bro GG nice work gg gg gg

ShinyMagikarp - August 25, 2015, 4:51 am

(Aug 25, 2015 03:49 AM)MoonKnight_ Wrote: [\[CITE\]](#) GG bro GG nice work gg gg gg

Thanks dude :D Enjoy the tools, Hope you stay using my site until I get CrimeTV finished :)

AsunaHF - August 25, 2015, 1:06 pm

Got back into my account, Ill continue posting updates e.t.c on this account :D

Update:

Found out that when trying to request a tv show and in the TV Show name and you type by using autocomplete or some browsers by pasting the tv show it will throw an error, I gave this error an if statement so if it happens you guys can see why its happening even if you dont read these changelogs. I'm working on getting this bug fixed in the meantime.

drxalaa - January 7, 2016, 2:22 pm

thanks bro

su much I need for bank checker

dvirt1995 - January 8, 2016, 6:45 am

great! thank you so much for this

Xphixiatex - January 31, 2016, 4:55 pm
