Thread: [Luminosity Link setup guide - using it with crypters to its full potential](#)

BahNahNah - April 16, 2015, 1:37 am

This thread will show you configure Luminosity Link and your crypter for the optimal performance. it will not go into detail with portfowarding/dns setup.

if you want to buy this rat, you can find the sales thread [Here](#).

1) Navigate to the build page. Enter your dns information and port, ENABLE installation, Userkit and any other options you want. Make sure silent mode is ticked, Then build your client.

Spoiler [\(Click to View\)](#)

2) Open your crypter, set injection type to itself and .net dependency to on. leave everything else off (except delay execution and junkcode if you want them).

Cyberseal: Spoiler [\(Click to View\)](#)

General settings

Spoiler [\(Click to View\)](#)

Select "itstelf" for injection

Fake message is optional

Uncheck startip

"Delete zone id", "Delayed execution" and "File Pumper" are optional.

Clone assembly is optional

Binder is optional

Uncheck all protection and rootkit options such as persistence.

Extension spoofer is optional

.net support must be checked

3) you are done, Luminosity Link is now working at its full potential. Make sure you are forwarded

correctly and you are listening on the port you set.

Spoiler ([Click to View](#))

HauntedPast - April 16, 2015, 1:42 am

Awesome guide!

I'll be sure to refer to this when i get around to buying it!

Marquees Turing - April 16, 2015, 3:24 am

The injection has to be itself in RazorCrypt?(Oh there is no option)

Cause otherwise the bot will pick paths relative to explorer.exe's path?

BahNahNah - April 16, 2015, 3:25 am

(Apr 16, 2015 03:24 AM)Marquees Turing Wrote: [\[CITE\]](#) The injection has to be itself in RazorCrypt?(Oh there is no option)

Cause otherwise the bot will pick paths relative to explorer.exe's path?

There is an image guide to setup with razorcryptor. simply dont select an injection type.

ast009 - April 16, 2015, 3:54 am

Nice guide!

It saved some time while using Luminosity Link

It worked perfectly tested on Cyber Seal

Drunk_Eyez302 - April 16, 2015, 5:52 am

i bought razor crypt but its not opening at all in vm player. whats the problem?

BahNahNah - April 16, 2015, 5:53 am

(Apr 16, 2015 05:52 AM)Drunk_Eyez302 Wrote: [\[CITE\]](#) i bought razor crypt but its not opening at all in vm player. whats the problem?

The vm will need to have .net 2 installed.

KFC Watermelon - April 16, 2015, 6:13 am

Excellent work! I would love to see a guide on the Crypto Miner or Anti-Malware next.

The Crypto Miner needs a lot of documentation, and I want to supply already-made miner files and example parameters. Do you have a lot of background knowledge in crypto currency mining?

BahNahNah - April 16, 2015, 6:14 am

yes, i have it set up, but the miner i use does not need parameters. what miner do you suggest? ill do some research and update the thread :)

as for the anti-malware, isnt that pretty straightforward? or am i missing something? it just cleans the registry and kills the processes right?

KFC Watermelon - April 16, 2015, 6:31 am

We should make specific threads for each feature for better organization :)

The Anti-Malware has a blacklisting feature that allows you to block specific processes and software. You can therefore stop the installation of any given software you'd like. You can make a list of applications and export them for other users to import.

The heuristic based Anti-Malware (Proactive Anti Malware) is the Bot Killer, it is heuristic based and removes what it finds is malicious. It's separate :)

...As for the miner, I will look into it more when I get home :)

Incendiary. - April 16, 2015, 6:44 am

Thank you sir ?

I will be referring to this shortly.

haxxorboiz - April 16, 2015, 8:32 pm

A crypto miner guide would be fantastic, I've been thinking about trying to figure it out on my own but I am going to hold off on that until I have other things figured out. It is currently CPU only, correct? And if so, is there any chance of GPU mining in the future?

?PORNHUB - April 17, 2015, 4:09 am

I use razor crypter and it didn't work either man :/ also i'm paying 3 bucks if someone set up this mining thing for me

KFC Watermelon - April 17, 2015, 4:54 am

(Apr 16, 2015 08:32 PM)haxxorboiz Wrote: [\[CITE\]](#) A crypto miner guide would be fantastic, I've been thinking about trying to figure it out on my own but I am going to hold off on that until I have other things figured out. The crypto miner allows you to use your own miner executable, so it can support CPU, GPU, and practically any crypto currency; provided you have the correct miner and parameter to support it.

SIM-2198759 - April 17, 2015, 6:02 am

Simple and easy to follow, thanks for this OP, i will be using this when i purchase the RAT.

Ainan007 - April 17, 2015, 6:16 am

Thanks for this OP

Will refer to this when I purchase Luminosity Link

?Syria - April 17, 2015, 6:37 am

Hey bro!

will it still be p resistant if I use thoes methods for cyber seal?

KFC Watermelon - April 17, 2015, 6:44 am

Any .NET Crypter that supports self injection (which should be ALL of them unless it's shit) should support Luminosity - including Luminosity's installation/persistence/rootkit - completely.

I always tested Luminosity's client with my own crypter (testing purposes only, I don't sell it) which uses AeonHack's RunPE with self injection. It works perfectly, no stability issues at all.

(Apr 17, 2015 06:37 AM)?Syriamanal Wrote: [\[CITE\]](#) Hey bro!

Luminosity's installation and persistence is definitely better than any crypters, so I suggest using it.

?Syria - April 17, 2015, 6:47 am

Luminosity's installation and persistence is definitely better than any crypters, so I suggest using it.
How much is ur servers detection rate? When it's built?

KFC Watermelon - April 17, 2015, 7:00 am

OP, does RazorCrypt work with Luminosity's installation? If you're injecting into explorer, it won't, because it will attempt to install explorer.exe rather than itself.

(Apr 17, 2015 06:47 AM)?Syriamanal Wrote: [\[CITE\]](#) How much is ur servers detection rate? When it's built?

It's quite detected, mainly gen variants by crappy AVs though. You will need a crypter.

SteeZZy - April 17, 2015, 7:24 am

Great guide, should help a lot of people but why turn off Melt File and Persistence?

KFC Watermelon - April 17, 2015, 7:28 am

(Apr 17, 2015 07:24 AM)SteeZZy Wrote: [\[CITE\]](#) Great guide, should help a lot of people but why turn off Melt File and Persistence?

Luminosity handles the melt and persistence. Using your crypters may interfere with Luminosity's.

SteeZZy - April 17, 2015, 7:31 am

(Apr 17, 2015 07:28 AM)KFC Watermelon Wrote: [\[CITE\]](#) Luminosity handles the melt and persistence. Using your crypters may interfere with Luminosity's.

Oh ok, that makes sense. Is it actually called "Melt" and "Persistence" on the RAT? Because I didn't see em in the screenshots on this thread or in sales thread ?

KFC Watermelon - April 17, 2015, 7:36 am

(Apr 17, 2015 07:31 AM)SteeZZy Wrote: [\[CITE\]](#) Oh ok, that makes sense. Is it actually called "Melt" and "Persistence" on the RAT? Because I didn't see em in the screenshots on this thread or in sales thread ?

In the builder there are options for Installation and persistence. Installation automatically melts the file.

You can disable Proactive Anti-Malware within Station Configuration. Please remember to hit 'Save Config' in order to save the setting.

I would recommend you just use File Guardian. That way Luminosity will startup your files and protect them with its rootkit.

MindFreak™ - April 20, 2015, 11:57 am

Do not enable IM3's startup. Luminosity's File Guardian will startup the file and inject it on system boot. File Guardian takes care of startup, persistence, and undetection.

KFC Watermelon - April 20, 2015, 4:08 pm

(Apr 20, 2015 04:02 PM)Geck? Wrote: [\[CITE\]](#) To prevent users losing money, xc crypter advanced doesnt work with luminosity.

Spoiler [\(Click to View\)](#)

When I crypt with start up disabled and self injection enabled the persistence does not work.
(LuminosityLink)

I have tried every setting and receive the same error, also when I run the crypted file it leaves a file on my desktop that is unable to be deleted.

Random file generates when executing crypted server(bottom left corner):

<https://gyazo.com/bb4c01461cc022cd2880c469fc0c9deb>

Unable to delete random file(makes it useless to spread):

<https://gyazo.com/3cca8c30aa518aa770347ca028a69317>

GIF of persistence not working(gif is looped, the process doesnt come back):

<https://gyazo.com/1392b8e6b396d9ebf25d652367bceae5>

with hidden mode disabled I just get this error:

<https://gyazo.com/759957c59a27cdb1581aa45f0b4b348c>

Tried every setting seperatly/together, the best I can get it to do is the crypted file being not persistence and leaving a randomfile on the desktop :/

Yeah, it's because he's trying to invoke the file using reflection. Luminosity should be injected via RunPE if you want proper Persistence. Also reflection breaks the keylogger.

Thanks
Use rijn and must clone assembly.

Markus1995 - April 6, 2016, 5:45 pm

Which crypter is the best at the moment?
Idk, seems as no one takes his job very seriously.

I just need one functional crypter for LuminosityLink.
Which i used:

MinerCrypt
TopherCrypt
TrilliumCrypt
ByteCrypt
CloudCrypter
RazorCrypt

Where 5/6 Crypters where completely burnt money because nothing works as it should... No Bots coming in through usenet spreading in all these Crypters, and no one cares a shit about making FUD Stubs for paying customers

Nice guide!

but my port 27015 dont work

ekwueme - April 9, 2016, 5:49 am

Good tool,I love this.keep it up man

Mormons - April 9, 2016, 7:22 am

I need help setting up my luminosity RAT.

BaBaU - June 21, 2016, 9:08 am

can you pm,how i can make something with cyber seal becouse some antivirus detect it...

john.corner143k - June 21, 2016, 12:38 pm

Hey even i am new to this but i have used Cyberseal before and to be honest initially it will take a little time to get get a complete FUD but its worth the effort.. Just try using some High quality Icons which you can find on iconfinder website.

Try and use a unique icon and try copying assembly's from legitimate programs which are not so common...

I am sure it will give you nice results within few attempts only,.. You just need to do some research on icons and apps for assembly's .

Best of luck :)

ausblacksmith1 - October 22, 2016, 8:02 am

Doesn't work any more. Start up doesn't survive! Scan time result is worse with cyberseal and it can't even think of surviving run time. I have tried everything humanly possible!
