Thread: [is vps or dedicated server required to host RAT](#)

ar665577 - April 16, 2015, 11:48 am

hi guys.i am new to RAT and want to know where and how to host the RAT.

1-if i have more then 1000 slaves so is it better to have a vps or dedicated server insted of using no-ip or dns.

2-how many slaves does a RAT and no-ip can handle to max.

3-which is the best vps or dedicated server provider that accepts bitcoin payment.

Anodise - April 16, 2015, 12:41 pm

I can give a definitive answer to number 2.

It really depends on what RAT you're using. No-IP will ban if you have a lot of clients so you shouldn't use that anyway. Ive heard NanoCore can hold upwards of a few hundred, as can Imminent Monitor. Neither of those would be a vaible option for you though since you're using the word slave and neither RAT should be used as malware. RATs generally aren't mean to hold thousands of connections.

Rich Gang - April 16, 2015, 12:43 pm

I can help you with getting a vps and a dns/domain to hold the bots on to avoid loosing them. Let me know , I can give you my skype.

ar665577 - April 16, 2015, 12:46 pm

i understand ur point but just for the sake of argument which RAT is better in holding max number of clients and does vps or dedicated server is required for that.

what if i have 5000 clients then who to handle or where to host and with which RAT.

what if i have 5000 clients then who to handle or where to host and with which RAT.Well like I said, the last time I was here the best RATs for this were IM3 and NanoCore.

ar665577 - April 16, 2015, 12:51 pm

ok so im3 n nanocore but can u give a idea of how many clients they can handle max.

Rich Gang - April 16, 2015, 12:53 pm

Really , it depends on the network and specs of the computer you are running it on. If you have a great computer/server to host on with good cores then you can hold 5000+

I heard Aeonhack say that someone once got ~1000 clients with NanoCore, most others get in the hundreds, as do people using IM3.

kournfie - April 16, 2015, 1:41 pm

i have 2k in im3, look my post in market

any reviews for G00d VPS with port forwarding ? i dont wanna host my rat in my pc anymore.

Kongou - April 16, 2015, 1:48 pm

Someone posted a picture holding 1300 clients on IM3. If they are stable and will last for a while, remains unknown.

kournfie - April 16, 2015, 1:52 pm

it was me, dude

what vps for rat hosting ? :P

Rich Gang - April 16, 2015, 2:34 pm

I can provide you with a vps and a vpn that has port forwarding. The vpn will be free but i'll have to charge for the vps. Let me know if you are interested.

Vicious™ - April 16, 2015, 2:45 pm

You don't need a VPS for a RAT, that is more for a botnet and if you want upwards of a 1000 clients you should use a Botnet anyway. It will be more stable with that many slave and you can utilize them better. If you think about it, when you get to that many anyway, you really don't need the webcam and other functions. It's honestly pointless since that ammount of slaves is best for DDOS, formgrabing, ect.

kournfie - April 16, 2015, 3:11 pm

Swerve

I know that botnet is much better, but i dont know any good bot developer

Rich Gang

Im using private vpn

Okay , if you want you can add me on skype. I can sell you a good VPS , I'll go first cause I'm new.

If you would like to try me out add (riichgang)

ar665577 - April 16, 2015, 11:53 pm

what if i want to spread my miner (not RAT with miner) on more then 5000 clients and it has http feature to change the seting to shitch currency on current slaves in just few clicks so i will still need a vps or a dedicated server or i can do it without server also.

erifeon - April 17, 2015, 12:48 am

(Apr 16, 2015 12:41 PM)?endetta Wrote: [\[CITE\]](#) RATs generally aren't mean to hold thousands of connections.

What makes you think that a RAT cannot hold thousands of connections? ?... Botnets and Rats are exactly the same in terms of client capacity, ultimately they're both servers so why would a RAT be weaker? It depends on the programmer's proficiency more than anything.

Awdr - April 17, 2015, 3:04 am

Although you don't need a VPS for a RAT I highly recommend you use one!

Supreme.tm - June 28, 2015, 9:07 pm

If your gonna be hosting more than a few hundred slaves, do not use a RAT. Use a botnet on a vps or dedicated
