Thread: [Email combo checker](#)

David - April 16, 2015, 3:11 pm

Hello there!

So I got a list of email:password combo's I would like to check, most of them are gmail but some're also live and Yahoo etc. I've got myself proxies and also DBC credits, is there any tool that can check these? I only found dictionary-bruteforcers myself...

Looking forward to receiving your replies!

He said CHECK not SHARE.

@OP

What are you trying to check? If the login works, or trying to crack the hashes. Im not fully understanding what you are talking about.

I'm in need of a checker myself.

I got a combo of emails:passwords and I want to check if they are valid and working. And tool that can accomplish this?
