Thread: [Hide Any File in Image](#)

xeinebiu - April 17, 2015, 11:31 am

I made a simple Program which can hide any file you want into any image ...

Features Password Protect File

All Bytes Are Encrypted

Use one image just one time ... Using one image more than one time can corrupt your file ...

Screenshot

Thehackerguy1 - April 17, 2015, 11:32 am

-8 Rep, i'd never download this in my life.

xeinebiu - April 17, 2015, 11:41 am

(Apr 17, 2015 11:32 AM)Thehackerguy1 Wrote: [\[CITE\]](#) -8 Rep, i'd never download this in my life.

Ok then it is not necessary to Comment if you have not tried This Program ...

tomlol23 - April 17, 2015, 11:44 am

I would also never try this shit considering your time spent here and your reputation

xeinebiu - April 17, 2015, 11:46 am

(Apr 17, 2015 11:44 AM)wulf yung Wrote: [\[CITE\]](#) I would also never try this shit considering your time spent here and your reputation

So what ... Who cares if you dont try ...

Thehackerguy1 - April 17, 2015, 11:48 am

(Apr 17, 2015 11:46 AM)xeinebiu Wrote: [\[CITE\]](#) So what ... Who cares if you dont try ...

Where is the need of being rude to someone if they do not want to try your respective tool?.

xeinebiu - April 17, 2015, 11:51 am

Bro .. I just Posted it ... i am not saying you have to download it and use ... it is just a thread ...
I know it is not useful tool but it can be mabye for someone ...

stunk - April 17, 2015, 11:59 am

I recommend getting a little more reputation, before posting a software that supposedly does one thing. People automatically look at your rep when they see your post. If you have negative reputation, well... They won't trust you.

I recommend no one downloading this software, as it maybe packed with malware.

Earn - April 17, 2015, 12:17 pm

I know where you guys are coming from, but jeez. Give the guy a break. The user's reputation has nothing to do with trying to infect people.

As you can see, all the neg reps besides nathan's don't even have a reason. If you think it may be infected, don't download it. Until the program is confirmed to be infected, don't tell others not to download it. He probably worked hard to create this program & he is releasing it for free. Be grateful.

stunk - April 17, 2015, 12:20 pm

True, I apologize.

I will try the program out, but sandboxed.

I'll report back with results.

Jcgob - April 17, 2015, 12:23 pm

Yeah, in a VM. If anyone finds out it's infected or not. Tell us.

stunk - April 17, 2015, 12:25 pm

It's not infected! But I do recommend one thing, make this easier. What's the difference between get file/hide file?

Jcgob - April 17, 2015, 12:33 pm

GUYS

The program is NOT obfuscated. I took a look at his code, and so far I haven't found anything that seems to be malware!!

in other words, it doesn't look like the file is infected

UPDATE:

I tested it in sandbox, it actually works too!

CodeAssassin - April 17, 2015, 3:08 pm

Also had a look

The file is clean as far as I can tell.

The application is as the OP explained using AES encryption, the code is fine not a bad example.

OP why don't you just post the source to pastbin? It would be much better for everyone to learn from, rather than just ilspy your bin.

Not sure why you ask for a password as i can't see it being used?

```
Code Dim cdc As cdc = New cdc()  
    Dim text As String = cdc.AES_Encrypt(AddressOf Me.TextBox1.Text, AddressOf  
Me.TextBox1.Text + "a")  
    Dim text2 As String = Path.GetExtension(Me.o.FileName)  
    Dim text3 As String = Path.GetFileName(Me.o.FileName)  
    text2 = cdc.AES_Encrypt(text2, "a12")  
    text3 = cdc.AES_Encrypt(text3, "a12")  
    Dim text4 As String = Convert.ToBase64String(File.ReadAllBytes(Me.o.FileName))  
    text4 = cdc.AES_Encrypt(text4, "a12")  
Err i'm a dumb ass, sorry I see now...
```

BrAnCHeD - April 17, 2015, 5:00 pm

You should always post the Source Code, too :D And if your Reputation doesn't get better, i'd create a new account ._.

stunk - April 17, 2015, 5:09 pm

Next time bro ... i will post source code too and then see if this contain any malware or not...

This program works in this way :

it adds to image all bytes converted to string (encrypted) and then if u wanna get the file back it judt real the string and then it check for password and then it will write the string into bytes and u will get ur file back ... thats all bro

(Apr 17, 2015 05:00 PM)_BrAnCHeD_ Wrote: [\[CITE\]](#) You should always post the Source Code, too :D And if your Reputation doesn't get better, i'd create a new account ._.

Thanks bro ... but i dont know why i have bad reputation i never have posted viruses , mabye I have asked for help

(Apr 17, 2015 12:33 PM)Jcgob Wrote: [\[CITE\]](#) GUYS

Thanks bro ... you are the only one which understood me ...
it is totally safe , mabye it is HQ Post but i tried to Code something and about bad reputation (i

never have posted viruses), i dont know why i have bad reputation ...

(Apr 17, 2015 12:25 PM)?Master Splinter? Wrote: [\[CITE\]](#) It's not infected! But I do recommend one thing, make this easier. What's the difference between get file/hide file?

If u click hide file , the file which u have choocen will be written in choosed image bytes ...

And if u click get file if will read the bytes of your file from image and then will write them in your choosen location ...

All bytes added to image are convertet as string and encryped (easy to decrypt for those who understand) ...

Ninja - April 18, 2015, 5:21 am

This is the programming section. Release the source code here or post in another subforums.
