If i install viruses and worms etc on a virtual machine will my main pc break

As i want to install viruses and stuff and then show how to remove them for my utube channel

Viruses like
Bonzie buddy
Desktop Strippers
rats
spyware
iloveyou
soBig
etc

And also to try and F**k up my hole windows on the vm

?

archangel.dmitry - April 17, 2015, 12:31 pm

You will have to disable couple of feature to isolate the VM. But generally speaking, if you are to test malware on windows VM, you need to use Linux host.

Fr?sh - April 17, 2015, 12:36 pm

I was wondering the same thing because I use my VM to test my friends RATs

You should be fine as long as you don't have any shared drives

Xycon - April 20, 2015, 2:29 pm

Honestly, it all depends on the actual virus or whatever, most no, but some yes, they can "escape"out of VM environments.
