Thread: [IMG Resizing Wtf](#)

eXero - April 17, 2015, 2:43 pm

Code ``
I cannot get the picture to resize to any amount of pixels. Wtf am I doing wrong?

? Soufian ? - April 17, 2015, 2:44 pm

Code ``
To make it easier, do this:
Code ``

The first one worked. I have to have the pictures that size. Now I have to tackle finding proportionate pictures that will fit the 800x300 box I have. Lol.

An Advice :

If you have a lot of images with the same properties, put a `class=""` in all of them like `class="image_cool"`

And on your file .css put this

```
.image_cool {
width:800px;
height:300px;
}
```

It's much better for you :D

And css inline is a bad pratice xD

I just figured I'll inform you, you forgot the measurement.

Code height="800px" etc
