EASY TO USE TOOL

Hello there,

Since I had some free time today I said why not code something really fast? (Although its late here.. So I am sorry if I died any mistake/caused bugs.. I will leave the source so you can check it up).

The features which includes:

Command Line

Command: /resolve | Syntax: /resolve <Skype ID>

Command: /email2skype | Syntax: /email2skype <Email Address>

Command: /portscan | Syntax: /portscan <IP> <Port>

Command: /ip2host | Syntax: /ip2host <IP>

Command: /host2ip | Syntax: /host2ip <URL>

Command: /checkstatus | Syntax: /checkstatus <URL>

Command: /shorten | Syntax: /shorten <LINK>

Command: /bypass | Syntax: /bypass <ADFLY LINK>

Command: /define | Syntax: /define <WORD>

Command: /checkemail | Syntax: /checkemail <EMAIL>

Command: /checkformat | Syntax: /checkformat <IP>

Command: /checkkeystats | Syntax: /checkkeystats <KEY>

Command: /createkey | Syntax: /createkey <KEY>

Command: /deletekey | Syntax: /deletekey YES

Command: /exit | Syntax: /exit <TimeInSeconds>

Command: /resolvedb | Syntax: /resolvedb <USERNAME>

Command: /whois | Syntax: /whois <WEBSITE>

Command: /screenshot | Syntax: /screenshot <WEBSITE>

Command: /numbercheck | Syntax: /numbercheck <NUMBER> *EX: +311234567

Command: /translate | Syntax: /translate\ <SENTENCE>

If the indicator is red this means that no key was found on the computer and you must create one by typing /createkey <KEY>.

If the indicator is green this means that a key was found on the computer and you may be able to access the features unless the key is invalid which will make it to receive only "Invalid Key" responses.

Download link: (HEX) PHP Code

<?php

68747470733a2f2f7777772e64726f70626f782e636f6d2f732f6e6d76626f396b62326f763963746c2f455455542e7a69703f646c3d31

convert it into TEXT

This is based on C99 API, and you must insert your OWN key by typing /createkey <KEY>. (For C99 API key request: [C99.nl](#))

This software might also help you make some money by letting people purchase banners. PLEASE, DO NOT SELL THIS APPLICATION.

Hope you find this useful, thank you! ?

I really hate the design... I'm sorry, but I really don't like it

nuk - April 17, 2015, 10:43 pm

Gotta agree that the GUI isn't that appealing but that doesn't mean shit as long as it works like it should ;) I do have a question though... Why not make this a console app if you're making users' type in commands? Not bashing...just curious ;) Seems legit though..thanks for the share ;)

Hello,

As I said, it was really late at night when I was coding it.. so trust me, I didn't have the time to re-design it. Although, since you get the whole source code in your hands you can do as many changes as you want both in GUI and code. ?

Mainly because the whole idea was around banners (people purchasing them) in case someone uses my source code and makes it a little better and re-designing the whole GUI to fit their needs. But one more important thing is the use of MsgBox's because some commands return some long

texts back. (Ex: keystats, translate, etc)

Well, that's true! Other than that though this is pretty damn awesome! :)

Cleaning the dust off

Getting this in front in case someone wants to download it :)

SIM-1456245 - April 26, 2015, 1:11 pm

This seems pretty cool, can you explain a bit more the features and how it works ?

N1nj4Styl3 - April 26, 2015, 1:28 pm

Hello,

Download the source code and check it by yourself, you will get the best explanation like that. :)

It's like all in 1 tool. ?

johnsexy500 - April 27, 2015, 10:23 am

Thanks. This might help with similar things im trying to do, thanks for sharing OP:) Btw the design is Okay :P

Sorry, unfortunately I have very limited time IRL that's why I can't update the GUI yet. I will make sure to do it once I have some free time.

Hope you find it useful. :)
