Thread: [Rat setup guide || FreeDNS || Darkcomet || NanoCore](#)

BahNahNah - April 18, 2015, 12:17 am

[Clean darkcomet download](#)

[Nanocore sales thread](#)

All rats below will require PortForwarding.

if you need any extra help or need a test install, post on my [rat help desk](#).

Making a DNS with freedns

Spoiler [\(Click to View\)](#)

- 1) Navigate to <https://freedns.afraid.org/signup/> and make an account
- 2) navigate to <http://freedns.afraid.org/subdomain/> and create a dns.
- 3) Change the Domain box to the one that you want and set the subdomain to the name you want your dns to have
- 4) you have created your DNS. We are done with the freedns website.
- 5) Download a windows client. There are many Freedns clients, if you want one you know is safe, you can download the one i made specifcily for this guide (open source)

Download: [\[BINARY\]](#) [\[SOURCE\]](#)

- 6) Log into the client and update your dns by right clicking and selecting update all. Every time your ip changes you will need to do this.

Darkcomet - Delphi

Spoiler [\(Click to View\)](#)

- 1) Click the blue bar that says "Darkcomet-RAT" in the top left of the software. Hover your mouse over "Server module" and select "Full editor (Expert)"
- 2) Another window will open, this is our build menu. The pages are displayed down the bottom left of the window.
- 2) In the "Main Settings" Window, it is recommended to use a security password. Dont forget it and dont use your password as you would for a website.
- 3) The "Network" page. This is where we will enter our DNS. for the port, choose something unique, goto random.org and generate a number between 1500 and 10000 and use the generated number as your port. Dont forget it!
- 4) Press the "Add" button beside the port box so it goes into the box below.
- 5) The "Module Startup" page. if you are using a crypter, make sure "Start the stub with windows" is unticked. if you are not, this page is optional.

"Drop file in": Where the file will copy its self to when executed.

"Melt": On execution, the file will delete its self and execute from the directory specified above.

"Change file creation date": The date that is displayed in the properties of the file.

6) The "Install message" page. This page is optional, this will show a messagebox when the file is executed.

7) The "Module Shield" page. if you are using a crypter, untick everything on this page. if you are not using a crypter, this page is optional. i wont go into detail about this page as most things are explained on it.

8) The "Keylogger" page. This page is optional, enables the offline keylogger and FTP support.

9) The "Host Files" Page. i wont go into detail about it, ignore the page if you dont know what it is.

10) The "Add plugins" Page. i dont know of any Darkcomet plugins so i will be ignoring this page.

11) The "File Binder" page. If you are using a crypter, this page can be ignored, most crypters have file binders. This page will allow you to attach another file to the darkcomet server, the file will run when the server is ran.

12) The "Choose Icon" Page. If you are using a crypter, ignore this page. This will set the icon for the outputted exe.

13) The "Stub Finalization" Page. Dont change any settings on this page.

14) Build the stub by pressing the "Build the stub" button on the bottom right of the window. Do not run the exe that you have just created, this is your dark comet server.

15) Listen on the port. do this by opening the "sockets/net" tab, right click and select "Add port to listen to". (Delete any extra ports by right clicking and select "disconnect socket")

16) If you set a security password, goto your darkcomet settings and enter it in the given space.

Nanocore - .Net dependencies

Spoiler ([Click to View](#))

1) Open the build menu by clicking the "builder" menu and selecting "Builder settings"

2) The "Basic settings" tab. This is the tab where we will enter our dns and port.

"Default group": Leave it as default. its not nessasary to change.

"Primary Connection Host": The dns we created

"Backup connection host": Leave this as 127.0.0.1

"Connection port": goto [random.org](https://www.random.org) and generate a number between 1500 and 10000 and use the generated number as your port. Dont forget it!

"Skip User account control": This option is not necessary.

"Request process elevation on execute": Force server to be ran as admin

"Run client when the computer starts up": If you are using a crypter, untick this. This option is self explanatory.

3) The "Advanced Settings" tab. These options can be left as default. if you are using a crypter, untick "Clear zone identifier".

4) The "Dns Server Settings" tab. Leave the DNS provader set to google.

5) The "Assembly Settings" Tab. This is where you can set an icon for your server.

6) The "Notification Settings" Tab. This will show a message box when the server is executed.

7) Build your server, a message will show asking if you want to start listening on your port, select yes.

Rich Gang - April 18, 2015, 12:19 am

Nice tut bro , will be helpful for beginner ratters.

Panel - April 18, 2015, 2:16 am

Great Tut, helped me out when i tried setting Dc up.

kivimarc - April 18, 2015, 4:51 am

Why do i have to make a dns?

Pliz help

BahNahNah - April 18, 2015, 4:53 am

(Apr 18, 2015 04:51 AM)kivimarc Wrote: [\[CITE\]](#) Why do i have to make a dns?

Pliz help

You don't "need" a DNS, but if your IP changes, your clients will still connect to you if you use one.

excusM3 - April 20, 2015, 4:04 am

Thanks for this tutorial mate. Gonna try it out!

PoisonDrt - April 20, 2015, 4:30 am

good tutorial bro, keep it up ?

amg64 - April 20, 2015, 7:09 am

Nice tutorial especially to those who are starting ratting. good job :)

excusM3 - April 22, 2015, 6:11 am

Do i need to use no-ip if i got a static IP?

Ketone992 - May 10, 2015, 5:43 pm

I got an error when I updated all

Memzy135 - May 19, 2015, 7:06 pm

Thanks man great release !!!!!!

thanks man good tutorial needed dns update also!

Nikem.D ? - May 19, 2015, 9:45 pm

nice and simple tutorial . great .

boggs12 - May 20, 2015, 12:09 am

Thank you for the update, but do i need no.ip?

#Skyline - May 20, 2015, 12:23 am

Nice tutorial.

This should help alot of members when it comes to setting up there RAT.

boggs12 - May 20, 2015, 12:32 am

i got an error using your darkoment.... though thank you for update

Memzy135 - May 20, 2015, 4:47 am

dont do business with this guy he put a rat on my PC!!!!

BahNahNah - May 20, 2015, 4:49 am

(May 20, 2015 04:47 AM)Memzy135 Wrote: [\[CITE\]](#) dont do business with this guy he put a rat on my PC!!!!

This is a blatant lie. He is just mad he got caught Multi-Accounting.

Raz3r - May 20, 2015, 4:51 am

(May 20, 2015 04:47 AM)Memzy135 Wrote: [\[CITE\]](#) dont do business with this guy he put a rat on my PC!!!!

Don't listen to this guy, he was caught multi'ing.

Memzy135 - May 20, 2015, 4:54 am

(May 20, 2015 04:51 AM)Raz3r Wrote: [\[CITE\]](#) Don't listen to this guy, he was caught multi'ing. where your proof? for a trusted member you dont have much proof?

BahNahNah - May 20, 2015, 4:56 am

stop ratting people i will quit posting!!!!

timmy2001 - May 20, 2015, 11:19 am

(May 20, 2015 04:49 AM)BahNahNah Wrote: [\[CITE\]](#) This is a blatant lie. He is just mad he got caught Multi-Accounting.

Hey man he got 50 accounts on here. He got lots of help from others to hack my e-mail. Pretty much everyone gave step by step instructions. He is now trying to hack my facebook account and other shit.

Don't help the skid. Go to the hacking section and look at any account that has lower than 200 posts. It's most likely this guy's account.

?

boggs12 - May 20, 2015, 3:52 pm

contact me if u need help in dc settings

f0hash - May 23, 2015, 12:14 am

swee thanks for the release

banned212 - September 19, 2015, 1:32 am

Mr BahNahNah Thanks for your support please Luminosity Link with crypter from Sarge, Trillium Crypt Reloaded Released please can you show me how it works with Luminosity cos i have tried all my best to time without number at the end i we still lost the connections so please how do i set it and this crypter is 100% FUD or does it mean is didnt support Luminosity? or is there anyone you can recommend

Up to my other rat's like Nanocore Darkcomet Njrat Babylon and i have tried to contact guys in HF that ran the service of rat setting they always turn down my offers please is there anyway you can been of help to me via tv
