Thread: [Luminosity Link setup guide - Cryptomining on slush's pool \(Only standalone miner\)](#)

BahNahNah - April 18, 2015, 4:22 pm

This thread will only show you how to use a standalone miner, as i dont know any command-line miner with no window that has no external libraries.

If you need some help setting up this rat, post on my [Rat support desk](#).

Creating an account for slush's pool

Spoiler ([Click to View](#))

- 1) Navigate to [Slush's Website](#) and create an account.
- 2) Goto the [workers page](#) and click "New worker"
- 3) Dont do anything on this page except enter "LuminosityMiners" in the login prefix, then press save butt at the bottom of the page.
- 4) We are done with the website. just copy down the "Worker login name"

Building a miner

Spoiler ([Click to View](#))

Currently this guide will only be using a standalone miner (reasons above). This is a miner that generates a stub output. i will be using "Exodus Miner", but it should apply to all.

- 1) The first important thing is that you must set the hash type/algorithm/Currency to SHA256 or BTC, depending what one is there (They mean the same thing)
- 2) pool information. for this section i will be quoting Exodus Miner, but you should be able to find it.

"Pool url": stratum+tcp://stratum.bitcoin.cz:3333

"Username": the worker login name we wrote down from before

"Password": This can be anything, but you must put something

- 3) GPU or CPU? BOTH! if your miner wont let you select both, select GPU.
- 4) Untick startup if option is available

.

5) Proxy? None.

6) if your miner has a "Silent mode" option, i recommend UNTICKING it and testing before sending to your clients. Thats what i will be doing, so keep your builder open.

if we have a loook on the workers page, we will see that my scoring hash rate for

"LuminosityMiners" has a value now, this means its working.

7) Now tick "Silent mode" and rebuild, this is our miner.

Intergeneration with LuminosityLink

Spoiler ([Click to View](#))

1) First, we need to goto the CryptoMiner page in luminosityLink and encrypt our silent miner.

So select browse and fild your miner, then press "Encrypt". This should generate a ".files" file.

2) Upload your encrypted miner to a direct download website such as directexe.com

3) The settings

"Miner file download": Your direct download to your encrypted miner (.file).

"Miner file id": This dosent matter, Press the green + besides the box, it should generate a number.
(Dont press the + again unless you are upgrading your miner)

"Miner parameters": Leave this blank.

4) you are done. Press the "Start/Stop Miner" button to begin mining on your clients.

?PORNHUB - April 18, 2015, 4:22 pm

fucking finally i love you dude !!!

Ainan007 - April 18, 2015, 6:59 pm

Thanks for this OP

This seems useful

kournfie - April 30, 2015, 11:10 am

Where can i get any silent miner working with LuminosityLink ?

iLOVELuminosityLink - April 30, 2015, 1:27 pm

i still don't know what i get for mining can someone explain me that? :)

BahNahNah - April 30, 2015, 2:04 pm

(Apr 30, 2015 01:27 PM)iLOVELuminosityLink Wrote: ([CITE](#)) i still don't know what i get for mining
can someone explain me that? :)

You mine crypto-currencies like Bitcion.

iLOVELuminosityLink - April 30, 2015, 2:16 pm

(Apr 30, 2015 02:04 PM)BahNahNah Wrote: ([CITE](#)) You mine crypto-currencies like Bitcion.
So you get Bitcoins for mining? :P

Enthrail - May 3, 2015, 3:37 pm

I'm using Luminosity & Miner Crypt and have followed your steps, but the hash rate on bitcoin.cz isn't changing, any ideas?

Incendiary. - May 3, 2015, 4:24 pm

This will help alot of people! Bookmarked

grates - May 3, 2015, 6:07 pm

Thank you very much for this post. I just bought luminosity today.

pensu007 - May 3, 2015, 8:32 pm

I'm using Luminosity & Exodus mineur and have followed your steps, but the hash rate on bitcoin.cz isn't changing, any ideas?

BahNahNah - May 3, 2015, 8:33 pm

It takes a couple of minutes, how long did you wait?

KFC Watermelon - May 3, 2015, 9:03 pm

This is definitely not the best way to use the Crypto Miner to its full potential.

I really, really need to get around to creating proper documentation regarding the Crypto Miner. Perhaps a program that generates a parameter for you with provided miner files.

It's not that hard to use. It's just the initial startup. It is very effective.

(May 3, 2015 08:33 PM)BahNahNah Wrote: [\[CITE\]](#) It takes a couple of minutes, how long did you wait?

Not only does it take a few minutes, but you also need to acquire a certain hash rate for it to even update.

Foreseeable - May 4, 2015, 3:32 am

I may have clicked "Silent mode" and opened it... Lol.
How do I remove it?

Also is it a good idea to Crypt it with a crypter?

Andrew Downsend - May 4, 2015, 3:34 am

Not only does it take a few minutes, but you also need to acquire a certain hash rate for it to even update.

But if you're going to add your own miner files, you need to add GPU mining.

Same here,followed exactly using insidious miner,no hash rate, do we have to add something in the parameter box ?

Do you have a check list or something to follow ?

Foreseeable - May 4, 2015, 5:38 am

Yeah I'm getting nothing too...

It only says 1 "worker" that's me

Since I infected myself... LOL

pensu007 - May 4, 2015, 6:10 am

Any help with this please ?

lavic2001 - May 10, 2015, 2:55 pm

Could someone help me setup Insidious Miner by Sank and LuminosityLink RAT. Links belo

<https://hackforums.net/showthread.php?tid=4213287&highlight=miner>

I know that i have to use p2pools because standard registered pools block botnets. I can connect to someones else p2pools block.

I will setup bitcoin minning in 1k clients for test. I need minning mentor :)

bobjones34 - May 18, 2015, 3:50 am

Have you tried it adding something in the parameter box ?

i cant figure it out either

DNS.SPYWARE - May 18, 2015, 4:04 am

i think this will only work with close to 5k stable high cpu bots. i feel as about 5% is on ehre

lavic2001 - May 18, 2015, 5:04 am

I didnt try anything. I dont know how to connect to p2pool node. Help me someone :)

I can get 5k clients, its easy...

ROFL OMG - May 19, 2015, 9:49 am

would love if someone could help me out with this!

lavic2001 - May 19, 2015, 9:53 am

(May 19, 2015 09:49 AM)Boosie Wrote: [\[CITE\]](#) would love if someone could help me out with this!
Me too ! I can pay for help me to setup p2pool - decentralized nod. Im using insidious miner.

HobsonsChoice - May 23, 2015, 8:08 am

is there a place where i can get the miner?

SIM-2267642 - May 27, 2015, 11:51 am

W?W Thank u for this nice guide, i bought miner in your guide also
very hepful guide working nice!
I Love LuminosityLink also :) amazing rat!!

OCTRAIN - May 29, 2015, 12:22 pm

I cant seem to get this miner to work? All the builds say this is not a valid win32 app

Not only does it take a few minutes, but you also need to acquire a certain hash rate for it to even
update.
Did you ever get round to making the documentation? If not could you please :D and ps thanks for
unlocking my licence
or could you at least give a list with miners that work

IntelliJ - May 31, 2015, 6:42 pm

Posting here to remember it in case I need it. Thanks OP, great tutorial. :)

MassylsKek - June 4, 2015, 1:01 pm

Anyone ever get around to making this work? Because I really am not getting any results with this.
<.>

IntelliJ - June 4, 2015, 4:11 pm

Because I really am not getting any results with this. <.>
Nah I didn't get any results with mine either. I wrote KFC Watermelon a message seeing if he ever
got around to proper documentation and he didn't reply.

lavic2001 - June 4, 2015, 4:24 pm

im using insidious miner with this and everything fine.

ROFL OMG - June 7, 2015, 7:18 pm

im doing exactly what you have in your thing plus im doing it with the same miner you have too and I get nothing under the hashrates ;/ anyone have a clue what im doing wrong

Decipher™ - June 21, 2015, 9:54 pm

Does it always say it is Offline?? Because it aint working for me

Bo Burnham - June 21, 2015, 10:52 pm

I fucking love it.

May I kiss you?

Rigatoni - June 22, 2015, 12:11 pm

Got it up and running, I tried testing it on myself and nothing worked, but follow OPs instructions carefully, I made a silent miner with exodus miner, crypted it, uploaded to a direct DL site (the encrypted .files file) and in 1 minute after sending the command to the bots i have a steady hash rate

swiftblackhat - August 13, 2015, 10:46 pm

followed your steps and it didnt work please help.. I ran it on all my bots and there getting error messages :(please help asap
