Thread: [Safe to Upgrade from OSX Maverick to OSX Yosemite with this stuff...?](#)

xiipord - April 19, 2015, 11:10 pm

Hi, Just wondering i'm on OSX maverick and OSX yosemite is sexy as all hell, but last time I upgraded my osx my bootcamp partition was deleted, as well as adobe after effects cc and some others wouldn't work properly.

Any one out there who has upgraded from maverick to yosemite with some "illegal" programs and bootcamp that works well?

thanks!
best of luck

BootCamp and upgrading aren't two things that go together well. Call Apple and ask, to start. I recommend following these steps to back up you Windows partition, but you're going to need a harddrive that's formatted to NTFS, so you might have to buy one or reformat a current drive (Ask if you need instructions for this).

<http://windows.microsoft.com/en-us/windows/back-up-programs-system-settings-files#1TC=windows-7>

Aside from that, I can't offer any other advice, since I haven't done this personally.

As for the illegal files, are you just refering to torrenting? If so, that won't stop you from upgrading. If you're running and illegitamte version of OS X, I have no idea, if that's the case, just stay on 10.9

No i have torrented versions of adobe software and cinema 4d along with some other stuff, that's what I meant by illegal, also when i upgraded to OSX maverick some software wouldn't work

Should all be fine, assuming that you upgrade the correct partition.
