There are too many subforums and not enough posts.

Start smaller.

Dark Energy - April 20, 2015, 11:18 pm

I have edited the theme to be dark now , Light theme was a bit annoying

WhiteBoiFromAfrica - April 21, 2015, 1:05 pm

I really like the theme. Good job on making this forum.

Dark Energy - May 1, 2015, 12:42 pm

I paid for my theme and I have the receipt for my purchase, you're probably the salty admin I banned who tried to dump my database / change all my template files

Also you're mad I banned your country from my website.

Why don't you go try to drop someone else s database and stop site trashing like the little 14 year old you are Frost.

You made some random skid admin also while I was sleeping so go away

User is just mad because he got demoted.

The reason he got banned was because he promoted another member to admin for no reason and without permission!

BE AWARE OF MAKING HIM ADMIN.

The rules clearly suggest that you cannot have a login-to-view like a user said a few posts above me. I can't read any threads or anything, fix this or don't bother advertising

It's not a login to view, learn what you're talking about / Guest can fully view my board but they cannot view threads, there is a difference and it prevents leeching. I also just talked to Omni and he didn't say anything about it

(May 3, 2015 01:13 PM)OBNOXIOUSAPPLE123 Wrote: [\[CITE\]](#) Why are your concurrent connection limitations set so low?

Anyone with a server can amp up threads on a shitty GET spam script and keep-alive some connections and make your entire site fucking useless.

learn2admin Why are you site trashing? lol and anyone with a stresser can hit you offline so what's the difference learn how to post

Quit multi-accounting, it's obvious because your only post are on my thread, get reported kid

Anyone with a stresser can hit off one of my VPN nodes. Then again, it's hard to down OVH with most stressers.

Also, you wouldn't even need a stresser. You'd need a 30 line python script that would keep-alive a few hundred/thousand connections. It's abusing your configuration, or lack thereof.

derp derp.

So, Mr. Blackhat. After downing my first OVH node, and we'll give you the benefit of the doubt and say you down my second one as well, how do you then down an Ecatel, and then proceed to down Zorro?

Please, inform me.

But, keep in mind, you'd need enough power to down them all at once before actually grabbing my home connection, and then you'd need to down that before I spoofed my mac and forced DHCP into

giving me a new address.

You're hilarious.
