supremmy - April 24, 2015, 3:37 am

I may be trying this product once more essential features are released.

Like USB, Skype, Facebook Spreaders.

I will also prefer the exploit to be silent, this will surely enable the products to archive much success.

RagZorro - April 24, 2015, 5:34 am

Awesome product without any dependencies! Vouch for Cibor

Mikescotoru - April 24, 2015, 1:02 pm

I lost gave up on hack forum for getting bad reputaion for such mundane issue.

Cibor just restored my interest in hackforum, he responded like a long time friend despite that the Black Dragon and crypter i got from him are user friendly he was still patient with me. Thanks Cibor, hoping to do more business with you soon

How does this achieve persistence?

Does it use an actual keyboard hook or the IsPressed option?

What does stability have to do with a keylogger? You are not communicating anything from client to server except for delivery of logs and actual stability is in recording keystrokes, which can be achieved through a persistent process with a proper keyboard hook.

Clear Cookies - do you mean removing it from the browser's AppData folders? Why do you not include a cookie stealer option?

"Bonus: MS Word .doc exploit builder" - Why have you included this with the Premium package?

Macro exploit is useless & public, don't even think of that.

If you have added a silent bundle, then good job on that. Which Microsoft Office versions does it work with? Does it have a CVE?

And in the end, why do you accept PayPal?

Are you the coder? I doubt so.

How would you bring about the "silent downloader" - Do you actually inject the downloaded file into the memory on/after execution?

DarkComet77 - October 25, 2015, 4:46 am

How would you bring about the "silent downloader" - Do you actually inject the downloaded file into the memory on/after execution?

1) Keylogger is directly injected in explorer.exe and some api are hooked in other process to protect keylogger's resources

2) Keyboard hook

3) Because keylogger can manage lots of number of logs and that the injection method is stable and won't make crash explorer

4) Depends on the browser but yeah

5) The MS Office exploit builder is macro, and is compatible with 32 & 64 bit versions, including

2013 Office

6) I accept PayPal, because I can

7) The file is simply downloaded and executed, no injection.

EDIT:

So, I tried this keylogger, and I can say that it is very good! Just dont can say this time works without rly .NET or no, but i test this in 1-2 days and can write answer. :) Only her that you want to use to maximize it you will need to purchase this crypter:

Debug Crypter < | 100% FUD | AutoBuy | Bypass Proactives | Persistence | AV Scanner

You will not be disappointed !!!
