Thread: [darkcomet could someone help me test if i did it right to setup darkcomet](#)

newbobhobic - April 25, 2015, 11:45 am

Read Title pls if anyone can help me send me his skype so i can add him i dont have vm[/font]

Activo - April 25, 2015, 1:51 pm

Just run on Sandboxie. You dont need to have a VM.

MArch335 - May 12, 2015, 8:15 am

Get njRAT, it's more stable and works better.

Just sayin

DarkComet is still stable and nJRAT definetly isn't better

OP, I can pass you a test slave

OP, I can pass you a test slave

not for me. Sure njRAT has less features, but whenever I have tried to use DC, it crashed on me, I lost my slaves within a couple minutes, client-side the process randomly crashes, it doesn't have proper error handling, the features don't work, etc...

I don't know how you get it to work, please explain to me

(p.s. I use a crypter and have disabled all features, the ports work fine on njRAT and even when I close it (it's able to listen on the port) it still doesn't work. (I can see my service on canyouseeme.org.) Instead of fiddling around with it I made the decision to move over to njRAT which doesnt drop my slaves.

Sorry if this seems like a rant, I don't mean it that way.
