I think Camtasia studio is the best. I've have experience with it and I must say that it's very good.

Dickface - April 25, 2015, 7:56 pm

Obs is decent and so is Camtasia

3p!x - April 25, 2015, 8:04 pm

I personally use Krut Screen Recorder b/c its light weight

Wheezy Gang - April 25, 2015, 8:06 pm

I personally have used Camtasia Studio in the past, worked great for me.

Rask0 - April 25, 2015, 8:20 pm

Look for a crack of Camtasia studio I used it before work great.

AssGang - April 25, 2015, 8:21 pm

The real question is, are you ok downloading a Torret for the pro version or will you stay with the free version?.

?

Cicada 3301 - April 25, 2015, 8:50 pm

Camstesia / hypercam are really good if you configure it right buddy :)

Jwan - April 25, 2015, 8:51 pm

Personally use fraps, it's okay i guess.

Comedic - April 25, 2015, 9:35 pm

Camtasia's really good if you're a beginner/intermediate. You'll pick up the skills fairly quickly too.

Champ?on - April 25, 2015, 9:47 pm

I'll say Camtasia Studio.

I used it a few times to record some tutorials about Photoshop a while back. Flawless.

Billie Eyelash - April 25, 2015, 9:48 pm

Same thing as most are recommending. I use Camtasia to record things I do on my desktop.

ale12386 - April 25, 2015, 9:49 pm

Fraps/Dxtory for games. Camtasia Studio 8 for PC screen.

B?ue - April 25, 2015, 9:59 pm

Dont use fraps, just, no, it gives low frame rates, super large file sizes, its just generally not that great.

I used to use it then i switched to OBS, it gives exactly same quality (if not, better) and almost no

frame rate drop ingame, and much smaller file sizes.

duckonnquack - April 25, 2015, 10:30 pm

fraps records in very good quality and doesn't lag..

CyberneticTitan - April 25, 2015, 10:41 pm

I've always used FRAPS to record basically everything. I'd recommend against it if you have poor CPU horsepower and/or low storage sizes.

OBS is also a good screen recorder.

If you own an Nvidia or AMD relatively mid-high end GPU, you can utilize their hardware H.264 encoder to record Direct X 11 games with barely any reduced frame rates.

Nvidia Shadowplay: <http://www.geforce.com/geforce-experience/shadowplay>

AMD Game DVR: <http://www.amd.com/en-us/markets/game/downloads/raptr>

1. You can set the frame rate for your output in FRAPS.

2. It does not give the exact same quality or better. FRAPS provides the best video quality available because it is recorded in an UNCOMPRESSED format, which is why it gives large file sizes. Any compression done by OBS to give smaller files effectively decreases the bitrate of the video, which is translatable to quality,

3. Frame drops can occur on all programs.

For me, and everyone who Ive asked, who has used both fraps and OBS, has stated that frame

drops occur significantly more on fraps. I never said it doesn't occur on OBS at all, ofcourse it can occur on all programs, but I don't think ive ever had regular frame drops on OBS anywhere near as bad as OBS.

MelT3d - April 26, 2015, 12:02 am

If you have an NVIDIA graphics card, you should use Shadow play. Works perfect for me.

DianTama13 - April 26, 2015, 5:18 am

ZD Soft Screen recorder work fine for gaming and desktop recording. not taking much size for video not like fraps...

Franklin Hatchett - April 26, 2015, 5:35 am

I agree with Camtasia, best of a program!

?Salty? - April 26, 2015, 5:47 am

I heard the iPhone 6 Plus has an amazing camera!

htuts - April 26, 2015, 6:49 am

Always using Camtasia for youtube video's

ParulSharma - April 26, 2015, 6:55 am

Give OBS a shot too, I have used it quite extensively, and it was good.

Black Shadow - April 26, 2015, 7:15 am

Camtasia studio I have just this minute installed myself.

Delusional - April 26, 2015, 8:25 am

Camtasia is the best imho.
