Thread: [Flash Player Ubuntu 14.04 Problems](#)

BlazinBlunts - April 25, 2015, 10:15 pm

I am trying to watch things on Ubuntu via HBO GO, Showtime, Cinemax, Southparkstudios etc.. I am not highly experienced with Linux just made the switch from Win7 to Ubuntu a few days ago due to HDD failure.. I have the flashplayer plugins installed. Youtube videos work but that seems to be the only thing that does lol. When I click play the screens stay blank. Any help would be greatly appreciated!

That means flash is not working. Youtube works because it has HTML5 fallbacks. If you're using a chromium based browser (chromium, chrome etc) go to "about:plugins" and check that Flash Player is actually enabled. If you don't see it, then it's not installed correctly and if that's the case follow [this guide](#).

Did you install Flashplayer from Ubuntu Software Center?

BlazinBlunts - April 26, 2015, 6:15 am

I tried Firefox and Chrome. Chrome has it listed in about:plugins. Both dont seem to work.

Try

Code sudo apt-get install pepperflashplugin-nonfree
Restart your browser afterwards.

Still not working ?

BlazinBlunts - April 28, 2015, 3:35 pm

Anyone have a solution to this? Its killing me lol
