Thread: [Password Brute forcing tool](#)

Slavoj Žižek - April 26, 2015, 4:03 am

Hey guys I have been working on a password bruter for about 3 days now and decided to make it open source!
its not the best in the world and it 100% needs loads of improvement but here is the place to start!
here is the gifrecorder thingy for it : <http://www.mediafire.com/download/8p167jtdw0udd47/bruter.gif>
and here is the download link : <http://www.mediafire.com/download/buh0q1oys9gkdx/Guliver.rar>
if you are gonna edit and give it away under you're own name then pls add me in the credits!
if you don't trust me then look through the code before running it, but i want to be legit so nothing dodgy here! ?

Get rid of the adfly, those can only be posted in the Referrals section.

ok there gone did not know i was not ment to do that...?

backshifted - April 26, 2015, 4:36 am

I'm sorry, but this is a very very cheesy way of bruteforcing:

PHP Code

```
<?php
```

```
Dim cc As New Random
```

```
Dim strpos = ""
```

```
While count <= NumericUpDown1.Value - 1
```

```
    strpos = cc.Next(0, pool.Length)
```

```
    result.Text = result.Text & pool(strpos)
```

```
    count = count + 1
```

```
End While
```

This is just trying to guess by using random values.

A better way would be to try all possible combinations 1 by 1:

aaaaa -> aaaab -> aaaac ... etc.

I posted a piece of code that does exactly that in the C# section.

Also, for your next bruteforce app, try using threads as this just hogs your UI thread.

But this is still a nice first attempt though (: keep trying to improve! ?

yeah dude as i said in the original post its not very good and not well optimised at all but its my first attempt so what the hell ?

suffixx - April 26, 2015, 4:57 am

It's not well coded, but it works :)

Nice.

You also can convert from c# into vb and other way.

Greetings

Hey man - gotta start somewhere :D Thanks for the awesome share and attempt at what I see as your first :D

Keep going and you will get there! need any help or advice or just a chat hit me up - hope to see you as a l33t or ub3r one day!

Take a look into a ThreadPool bud. You could have a bruteforce firing 10-50 attempts at a time asynchronously.

Hmm, i think a single foreground thread is better for this as it claims higher priority, and managing multiple threads costs you quite a bit of performance.

Just keep that in mind :P (Threadpools are very good for other things though!)

How so? Mind explaining maybe, because this is how i was taught threading.

Ninja - April 26, 2015, 6:19 am

Is this a bruteforcer for a website? Does it bruteforce a hash? Like how does it know it successfully bruteforced the password?

thank you dude, my next buy id gonna be leet or uber any way :D

I know my code is extremely shit but it works (sorta) so im fine with that...

(Apr 26, 2015 06:19 AM)Tyranitar Wrote: [\[CITE\]](#) Is this a bruteforcer for a website? Does it bruteforce a hash? Like how does it know it successfully bruteforced the password?

It bruteforces any login you just click on start and click on the password box in order to know when the password is successfully cracked its up to you?

johnsexy500 - April 27, 2015, 10:41 am

Perfect, i was looking for some release like this, trying to make a site bruter should help me out :)
Thank u
