use the online builder to get your stub.exe or use visual studio to compile the source

Could you just PM the link, I tried decrypting it multiple times with a ATOM-128 decrypter & then Base64.

I get a link, but it doesn't work even after replacing "%3F" with a "?"

That would be because your webserver doesn't have hex2bin installed and setup to the php.ini

It is just a warning message it doesn't cause any actual fail..

You could edit bot.php and assign the variable yourself with some simple empty text or turn warning errors off.

Duck On Quack - April 30, 2015, 9:44 am

Its making it so it wont show bots or the config or anything.

Thank you for linking me to the user that is selling this source. I am the creator of this botnet and was intended for educational purposes. I released this well over 2 years ago in the PHP section. The reason I deleted it was because of the lack of functionality and efficiency.

Hey,

i got a short Question:

Why arent my slaves shown up?

I build the .exe. No error occurred but after starting in vm/sandboxie, nothing changes on the bots page (already included the fix)

while building i insert the link to the listener (h t t p://w\\w\\w.mypageblabla.com/exo/listener.php) and build it. :/

(must censure the http & www because i dont have over 50 posts xD)

You have to decrypt it google ATOM-128 decryptor and base64 decoder put

ZfJG6Sjb6SjbC in the ATOM-128 decryptor and you get an error copy the string of letters and
numbers you get and put it through base64 decoder if you have an error tell me it and I can most
likely tell you the answer.

For HTTP bot it always depends on the server where you're hosting it.

On a shitty VPS.. probably not.

Why do you want to load 40k on .NET malware anyway? LOL.
