Thread: [Help you make your computer run faster](#)

G?Nj? - April 27, 2015, 9:56 pm

I have a 3 programs that will help your pc run much faster and smoothe

The programs are

CC Cleaner use to clean registry

RegCleanPro Use to clean registry

Driverupdater2.2 will update your drives and make your pc run smooth i noticed a huge diffrence in my computer after running these 3 programs!!

Enjoy If you need any help just pm me:D

I'll check this out please pm me sir thank you

NukeHV - April 28, 2015, 2:30 am

I always use RegCleanPro to make my system faster, Thanks for helping the community :)

Ghanem - April 28, 2015, 7:36 am

CCleaner is popular but the last two you listed doesn't make me comfortable.

There both good programs to clean your registry to make your pc run smoother takes all errors outta you made outta your pc check it

its a system tweak

<http://prntscr.com/6z7kvt>

<http://prntscr.com/6z7mp8>

Showing you it shows errors then cleans it and makes your pc quicker when opening browsers or just being on the pc in general after a while your registry is what slows down your pc

UnPluggedToaster - April 28, 2015, 10:57 am

never use driver updaters, always update drivers from the manufacturers website or you can be

infected with malware, brick your pc, or cause a whole host of other problems. Also, you aren't suppose to clean your registry, windows itself manages it and if any program interferes with the registry, it can cause problems. That is why ccleaner always makes you backup your registry before cleaning it.

How to update your drivers

Open control panel, I am sure you know how to do this.

Click on the option Hardware and Sound. Once you do, you will be greeted with this screen.

Get click on the option device manager at the top right

Once your on this screen, you can command windows to check for driver updates from OFFICIAL sources that are COMPATIBLE with your pc.

If I want to check for updated drivers related to my network adapter (wireless). I open the drop down menu titled network adapter as seen below.

You will then see drivers for your network adapter, just right click on the one you want to update and hit update driver software and your done.

Never ever download driver updater software from the internet, they will bring you nothing but malware and hardware problems.

I dont care about your opinion, I am just trying to stop other people from using this software since every single review I have read says this is a scam, its just malware, spyware, bricks pc, breaks drivers. Why would you risk using this software when windows does it for free and its 100% safe to use. Doesn't make any sense and I am sure plenty of people would agree with me.

G?Nj? - April 28, 2015, 11:57 am

thats your opinion some people on the forums already use these programs and it makes there pc smoother so sit back and relax if it bricks your pc and is hasnt bricked mine and ive had the program for quite some time now then you will be fine relax kiddo

G?Nj? - July 29, 2015, 3:34 pm

you can still grab these from me if you want i can provide virus scan etc!

5chn4pp - July 29, 2015, 4:52 pm

The second one is very bad for your registry.

It makes errors in the registry, it makes more errors in your computer, it will not help your computer, you are actually destroying your own computer.

???

Do you know how a registry cleaner works?

Do you know how a registry cleaner works?

Agreeing with Flare here, Registry cleaners are not beneficial at all. We do not care about your opinion of them, we just can't have people thinking they are ok to use.
