Thread: [THC-Hydra Standalone App No Root Needed](#)

(i)(c)(u)(r)(u)(o)(k) - April 29, 2015, 10:26 pm

I give you THC-Hydra for android

A simple easy to use standalone android application

With this you can bruteforce just about any type of protocol/server

NO ROOT NEEDED

Simple Example

Code -l admin -P passwords.txt ftp://targetsite.blahh

Download Here

<http://parentsecurity.noip.me/uhydra.apk>

(i)(c)(u)(r)(u)(o)(k) - May 8, 2015, 3:35 pm

Hydra in a single application no need to download terminal emulator for hydra just use this single application.. It comes built in with a password.txt downloader..

(i)(c)(u)(r)(u)(o)(k) - May 22, 2015, 1:29 pm

Let me know if you have any issue's with using the app or it fails to operate.

(May 22, 2015 01:29 PM)icuruok Wrote: [\[CITE\]](#) Let me know if you have any issue's with using the app or it fails to operate.

I'm sure no one's gonna try it unless they are sure its not malware.

Also people have dSploit

(i)(c)(u)(r)(u)(o)(k) - May 23, 2015, 12:56 pm

Its not maleware I can give full source code..

Also what does Dsploit have to do with this...?

Isn't Dsploit just a arp spoofer with sslstrip

Interceptor-ng puts Dsploit to shame..

Hydra is just a protocol bruteforcer

Nothing to do with dns spoofing or arp spoofing

icebreaker - June 18, 2015, 3:56 pm

Hello i have this error :

error: only position independent executables (PIE) are supported.

Electronic Holocaust - June 19, 2015, 4:38 am

Just get linux deploy and hydra

(i)(c)(u)(r)(u)(o)(k) - June 19, 2015, 1:20 pm

(Jun 19, 2015 04:38 AM)Electronic Holocaust Wrote: [\[CITE\]](#) Just get linux deploy and hydra
Android is linux... So all you need is a version of hydra compiled for your android.. "ARM" version...
ARM is the chipset default to most androids...

Just use a linux/arm compiled version of hydra and access it with a terminal application..

Or get hydra source code then compile the source on your device.

To say install linux on your device is just dumb because its already linux.. You just need the binary version compatible with your chipset.

(Jun 18, 2015 03:56 PM)icebreaker Wrote: [\[CITE\]](#) Hello i have this error :
error: only position independent executables (PIE) are supported.
This error is caused because your android default version of CURL is updated to a higher version.
This higher version of CURL will not allow the download of the main hydra binary because its iframe URL linking..

You can fix this by downgrading your CURL.

This should patch and fix the issue

icebreaker - June 20, 2015, 5:46 am

Hello , thank you

I have tried with this link and linked hydra is not working and my system is crashed ...
can you compile your version for Android L ?
Or can i replace my curl to old curl ? Can you send my your curl ?

(i)(c)(u)(r)(u)(o)(k) - June 20, 2015, 12:38 pm

Uninstall the hydra application..

Then follow the xda link to the fix patch of curl.

There is a version of curl there you can download..

But you need to patch the system file to bypass PIE

Its a new security update added for most nexus based devices..

Once you patch it then re-download and install the hydra app here..

You can also just download terminal emulator then get a arm binary version of hydra...

I can give you a apk terminal emulator plugin thats adds hydra if need be.

icebreacker - June 20, 2015, 3:50 pm

Hello ,

Can you give my the APK terminal emulator plugin ?

thank you greetz:

Edit:

One) i have found your terminal plugin . I have tried not working

I have try the new linked on Android L . I have linked this file its hydra working . But not working its reboot (system crashed) and i cannot install new apks

I have flashing with odin to 4.4.2 and i have copied the linker file ok recovery to L... cannot install apk and reboot not working .

can you compile your hydra for L ? Or can you change thr Curl version ?

Greetz

automatischa - July 30, 2015, 10:50 pm

Doesn't work since Lollipop (Only position independent executeables) PIE error. Needs a workaround, flashing bypasspie.zip is too complicated for new android users...

(i)(c)(u)(r)(u)(o)(k) - July 30, 2015, 10:55 pm

Download terminal emulator from google play then download and install this plugin for it

<http://droid-hacks.com/hydra/Hydra-Term-Plugin.apk>

Open terminal and type hydra

(i)(c)(u)(r)(u)(o)(k) - September 1, 2015, 11:08 am

Ok guys I tried to patch some code and get things working

<http://parentsecurity.noip.me/uhydra.apk>

Jesus666 - September 1, 2015, 1:05 pm

Niiiice I'm am going to check this ASAP

Fucking epic

(i)(c)(u)(r)(u)(o)(k) - September 1, 2015, 3:48 pm

(Sep 1, 2015 01:05 PM)?????l?? ?T ?l???? Wrote: [\[CITE\]](#) Niiice I'm am going to check this ASAP

Thanks man I enjoy the support, Its why I create such software/app's

Let me know if you have any issues or questions on using the app.

Madchild - September 2, 2015, 5:01 am

Can you help me with that ? :D

(i)(c)(u)(r)(u)(o)(k) - September 2, 2015, 7:19 am

(Sep 2, 2015 05:01 AM)Madchild Wrote: [\[CITE\]](#) Can you help me with that ? :D
its failing to download and chmod the hydra ARM binary file..

Its uses curl to download the binary file

For some super odd reason your phone doesnt have curl installed and it should.. curl is a default binary for just about every android I have ever seen..

Mind me asking what type of android device you are on ?..

And to fix this you have to install curl binary on your device then it will work.

Madchild - September 2, 2015, 9:47 am

I am using this phone as secondary its fake note 4 (Chinese phone)

I can't use that on iPhone which is my primary phone

How can I install curl binary on my phone ?

I've searched google and found nothing -.-

(i)(c)(u)(r)(u)(o)(k) - September 2, 2015, 10:02 am

You must first have root on the device..

Then you can use this app here,

<http://www.apkpure.com/curl/io.github.faywong.curl>

Install to /system/bin or /system/xbin

And then un-install the hydra app and re-install once you installed curl using the above app, And everything should work.

You could also try installing a older version of terminal emulator app then install this plugin I made for it here

<http://droid-hacks.com/hydra/Hydra-Term-Plugin.apk>

This wont require root on the device.. But it might require you have the right version of terminal emualtor.

AuntEsther - September 2, 2015, 11:59 pm

If it is for real for real....AWESOME. I'm sure a few people will be willing to give up Zanti for this.

(i)(c)(u)(r)(u)(o)(k) - September 4, 2015, 11:56 am

Yes its legit, But Zanti for android is just a tool to exploit your local network with arp spoofing and dns spoofing methods... Even then Zanti isnt the best android app for this, In this case Interceptor-NG is the best android app to exploit the local network..

Hydra is just for bruteforcing logins for a certain protcol like ftp,rdp,vnc,ssh,http,http,ect++

Inside and outside the local network

I created a android app that utilizes the console version of interceptor-ng

<https://hackforums.net/showthread.php?tid=4975327>

This app here will allow you to capture the raw data packets/cookies/logins made on any device/system on the same wifi as the android device.

Joloham0808 - January 6, 2016, 12:59 am

Why Cant I Download it Anymore?

(i)(c)(u)(r)(u)(o)(k) - January 6, 2016, 12:32 pm

(Jan 6, 2016 01:59 AM)Joloham0808 Wrote: [\[CITE\]](#) Why Cant I Download it Anymore?

Il update it agian soon and update thread once I fix the app and download agian
