Thread: [LuminosityLink Crypting Guide - Using Luminosity's Ring3 Rootkit/Startup/Persistence](#)

byte[] - April 30, 2015, 7:03 pm

[LuminosityLink](#) is a highly advanced RAT that contains features such as a usermode ring3 rootkit, powerful persistence, silent startup, and amazing Anti-Malware/Bot Killer. However, crypting Luminosity while using all its great features can be a challenge. Therefore, I have created this tutorial to assist users.

What Crypters Work Best?

According to [KFC Watermelon](#) himself, any crypter which stub is coded in .NET and has self injection will work perfect with Luminosity and its features. He recommends AeonHack's RunPE, stating that the self injection on it works excellent with Luminosity and its rootkit.

If you are going to purchase a crypter, it is highly recommended that you PM the seller first to ensure it works with Luminosity. Send him or her a link to this thread - it will be helpful to the seller as well.

Crypter Settings:

If your crypter meets the above specifications (.NET Crypter with self injection), disable all settings within your crypter (such as startup, persistence, mutex, etc) and just enable self injection, "Inject into self." That is all you need. You may then enable the startup/persistence/rootkit within Luminosity.

If your crypter does not meet the above specifications, meaning it is coded in another language (AutoIT, C++, etc), then you must disable the startup/installation/rootkit within Luminosity. You must then enable the startup option within your crypter. You should also enable ".NET Support" within your crypter, if it's an option.

Contact your Crypter Seller!

KFC Watermelon provides support for LuminosityLink. He does not provide support for crypters, as he does not make or sell them. You should contact the coder of your crypter, and/or the support, in order to get the appropriate settings and information.

In addition, you may post a reply to this thread to ask for help. If you have appropriate crypter settings, it would be greatly appreciated if you posted them here for others to see. Thank you!

Incendiary. - April 30, 2015, 7:22 pm

Vouch,

byte is a very skilled person, knows his shit.

His crypter is very good, I would recommend checking that out.

LegendaryFox - April 30, 2015, 7:57 pm

Time to figure out how to use it with RazerCrypter :C

However VERY usefull guide thanks

EDIT: Well RazerCrypter is incompatible sadly. Also AeonHack's RunPE is source only, well I'm screw'd now ^^.

BahNahNah - April 30, 2015, 9:53 pm

You can use my opensource crypter.

It uses aeonhacks runpe.

h4tee - May 1, 2015, 12:05 am

Hello byte,

i would like to contribute to your thread by mentioning this -

Luminosity is a very size-dependent RAT. Now, im not 100% sure of this, so ignore this if im wrong, but what ive noticed is that if you make the crypted file too large, the Luminosity's stub will simply get corrupt and the RAT wont work. Now, sorry if thats already known or basic logic, just wanted to leave it there.

Also, reading from above if youre using a crypter that allows you to change icon/assembly (like cyberseal) you might notice that if your rat is not in the same size or close to that as the original, safe file, you will get alot of bary detections. Therefore, use a smaller file to copy assemblby from, some kb's to match the file size in a radius of 300kb and you should be fine!

Hope i helped someone.

KFC Watermelon - May 1, 2015, 2:44 pm

This is incorrect information. The size of the output has nothing to do with wherever it will work or not.

I can't provide support regarding crypting Luminosity 9/10 of the times. I don't code a crypter. I'm not the support of your crypter.

DaPiranha - May 1, 2015, 3:36 pm

Happy this works great with Abyss Protect! A lot of my customers are satisfied.

chinchadder - May 2, 2015, 7:56 am

Does it work with cyberseal?

KFC Watermelon - May 2, 2015, 8:11 am

(May 2, 2015 07:56 AM)chinchadder Wrote: [\[CITE\]](#) Does it work with cyberseal?

Should work fine with CyberSeal, though I cannot personally recommend it as I have not used it.

n0\$3ratu\$ - May 2, 2015, 9:08 am

(May 2, 2015 08:11 AM)KFC Watermelon Wrote: [\[CITE\]](#) Should work fine with CyberSeal, though I cannot personally recommend it as I have not used it.

Ah thanks, im about to get fileguardian or cyberseal, what do you recommend or what would you get?

Ponut - May 2, 2015, 9:13 am

(May 2, 2015 09:10 AM)chinchadder Wrote: [\[CITE\]](#) Ah thanks, im about to get fileguardian or cyberseal, what do you recommend or what would you get?

You can also test my free crypter

<https://hackforums.net/showthread.php?tid=4803353>

It's currently fud.

?

KFC Watermelon - May 2, 2015, 9:18 am

(May 2, 2015 09:10 AM)chinchadder Wrote: [\[CITE\]](#) Ah thanks, im about to get fileguardian or cyberseal, what do you recommend or what would you get?

File Guardian won't work with Luminosity's Rootkit/Installation/Persistence.

KFC Watermelon - May 8, 2015, 6:59 am

This thread needs to be updated. The Rootkit may now be used with native and AutoIT crypter. Only installation needs to be disabled.

lavic2001 - May 8, 2015, 11:13 am

Cryptex reborn works fine with your tool KFC. I will make tutorial how to make fud using LuminosityLink and Cryptex_Reborn

ILoveTheCoco - May 8, 2015, 11:42 am

Can anyone help me with crypting using Cryptex Reborn. Thanks guys. :)

mr_patate - May 9, 2015, 3:50 am

Any news from a good crypter that works with LuminosityLink ? AeonHack's RunPE is source only :-)

polopolo - May 14, 2015, 10:35 pm

Hi there!

I started a thread regarding criptex specifically but I m highly interested in Luminosity crypting guide. Keeping a look on this post as it looks very interesting.

Would appreciate anyone posting extensive tutorials about ideal way to crypt LuminosityLink (especially with cryptex reborn).

Many thanks in advance

MoDDJxBz - May 14, 2015, 11:10 pm

to cut this short just dont double enable anything or enable everying in LL and crypt

smaxzax - May 15, 2015, 5:55 am

ByteCrypter v3 should work with LL correct??? it has .net self inject ...

oscarcito - May 28, 2015, 11:42 pm

i have problems whit byte crypter i run the crypted file and execute and the process runs infinite

KFC Watermelon - June 1, 2015, 1:49 pm

(May 28, 2015 11:42 PM)oscarcito Wrote: [\[CITE\]](#) i have problems whit byte crypter i run the crypted file and execute and the process runs infinite

This should be fixed in 1.1. It is an issue regarding process watchdog and some crypters. Let me know.

alhindi1616 - June 4, 2015, 3:23 pm

does it work fine with byte crypter v3 the latest update it has the self inject thing on it ?

KFC Watermelon - June 5, 2015, 3:30 pm

(Jun 4, 2015 03:23 PM)alhindi1616 Wrote: [\[CITE\]](#) does it work fine with byte crypter v3 the latest update it has the self inject thing on it ?

I think byte crypter should work without issue, as long as it has self injection. I cannot confirm this, however.

SIM-2212192 - June 5, 2015, 8:04 pm

Have you tried it with abyss protect? just wondering. Thanks.

Maxman190 - June 7, 2015, 5:24 pm

Does anyone know which crypter this is compatible with? Doesn't work with Byte Crypter. I only enabled the self injection option, left everything else unchecked. I ran program, nothing happens.

Charizarde - June 7, 2015, 5:27 pm

Miner Crypt is compatible with Luminosity, you also get a discount for having Luminosity

BahNahNah - June 7, 2015, 5:28 pm

(Jun 7, 2015 05:24 PM)Maxman190 Wrote: [\[CITE\]](#) Does anyone know which crypter this is compatible with? Doesn't work with Byte Crypter. I only enabled the self injection option, left everything else unchecked. I ran program, nothing happens.

Try putting 127.0.0.1 as the dns when you build the stub and also make sure you are listening on the same port.

sorry but i don't understand.. Myner Crypt is a miner with dedicated crypter or what? can i crypt LL with it?

Can you explain? thanks

byte[] - June 9, 2015, 5:20 pm

(Jun 9, 2015 03:30 PM)alfaGt Wrote: [\[CITE\]](#) sorry but i don't understand.. Myner Crypt is a miner with dedicated crypter or what? can i crypt LL with it?

Can you explain? thanks

Miner crypt is a crypter with an inbuilt miner. You can crypt LL with it.

alfaGt - June 10, 2015, 3:24 am

and which mining pool do you recommend? any special settings?

byte[] - June 10, 2015, 3:00 pm

(Jun 10, 2015 03:24 AM)alfaGt Wrote: [\[CITE\]](#) and which mining pool do you recommend? any special settings?

If you are using a large amount of computers I would recommend using a proxy so the miner doesn't ban you. Any pool usually works, I've always enjoyed <https://www.btcguild.com/>. I've also used <https://www.ltcrabbit.com/>, not sure how they are now, but I know they were good before.

gifar_ucuL - June 11, 2015, 12:43 pm

which code this rat ? i want to try if this good thanks

sirarduin - June 11, 2015, 3:08 pm

Luminositylink is coded in .NET 3.5

byte[] - June 11, 2015, 3:32 pm

(Jun 11, 2015 03:08 PM)sirarduin Wrote: [\[CITE\]](#) Luminositylink is coded in .NET 3.5

I think the builder is .net 3.5. The stub however is 2.0 for sure.

sirarduin - June 12, 2015, 5:48 am

Does minercrypt remove the .NET dependency on the clients side ? (All my VM already have .NET 2.0)

jabX - June 13, 2015, 12:38 pm

What Crypter works good other then AeonHack ?

byte[] - June 13, 2015, 7:57 pm

(Jun 13, 2015 12:38 PM)jabX Wrote: [\[CITE\]](#) What Crypter works good other then AeonHack ?

I do not recall AeonHack having a crypter.

jabX - June 13, 2015, 8:02 pm

(Jun 13, 2015 07:57 PM)byte[] Wrote: [\[CITE\]](#) I do not recall AeonHack having a crypter.

no idea in the Guide it says: "AeonHack's RunPE" was tested with LuminosityLink extensively.

Obviously I'm wrong lol, I was thinking there is a crypter called AeonHack's or RunPE

I'll be buying ur minerCrypt tomorrow

byte[] - June 13, 2015, 8:19 pm

(Jun 13, 2015 08:02 PM)jabX Wrote: [\[CITE\]](#) no idea in the Guide it says: "AeonHack's RunPE" was tested with LuminosityLink extensively.

Oh I see, no a RunPE is a method of mapping bytes into memory, and the RunPE class used for testing is coded by AeonHack.

sirarduin - June 14, 2015, 9:22 am

After several tests, I can say that MinerCrypt work like a charm with LuminosityLink. I suggest the use of a custom .ico to make the file more believable.

You can use a website that convert PNG to .ICO. (GOOGLE SEARCH)

However, I haven't found a way to set the miner to use a specific % of CPU/GPU.

Kilikian_Arch - June 14, 2015, 12:50 pm

is this RAT free? where do we get it from?

sirarduin - June 14, 2015, 3:56 pm

Are you serious ? You couldn't just go in the rat section and read the post-it Thread ?!

-search button

-google

-the first post in this thread have a link to it

Can't post a link until 50 posts

Flamax - June 15, 2015, 1:40 pm

Can anyone help me set up with Cyber Seal, I used the guide from the forums but this seems not to be working anymore.

d4rksidez - June 17, 2015, 1:45 pm

Dear KFC Watermelon, I hope you're reading this asap.

I just bought your great RAT and setup everything (think it's gonna work, didn't test yet but gonna startup my vm right now) since im no noob i think everything is right.

Now to the topic:

I'd like to receive the free crypt which you wrote in first post.

("Purchase within the next 12 hours and receive a free FUD Crypt!

Includes one free Fully Undetected Crypt. Also receive a good discount on a Premium FUD Crypter! PM for details")

Sadly, I can't send you an PM because for PM I'd need >25 posts. Could you please write me an PM and we get this thing done?

Thanks a lot, greets :)

Cryptolo - June 21, 2015, 2:03 pm

Hi KFC Watermelon,

I have the same problem as d4rksidez, the post before.

I'd like to receive the free crypt, but I can't send you an PM because for PM I'd need >25 posts.

Then I still have the problem that I can not create the client .

it is always an error message "Can't build the client. Please try again."

I tried it on a VM Win7x64 (virtualbox) and WM Win8.1x64 (wmware) system, and then I tried on native Win7x64 , now is my license locked.

Could you please write me an PM,

thx

push

this is one of the issues where I can only post here .

cha0z - June 25, 2015, 2:27 pm

I used crypterminer.. tried it...but after i did the build..AVG detects it

Rewiind - June 28, 2015, 3:46 am

What crypter are you guys using?

StreamFlooder - June 28, 2015, 9:11 am

(Jun 25, 2015 02:27 PM)cha0z Wrote: [\[CITE\]](#) I used crypterminer.. tried it...but after i did the build..AVG detects it

If your using client installation thats the problem. I have the same problem with crypterminer and other crypters. Once client installation is off no problems anymore.

DeluxeArmy - June 28, 2015, 2:00 pm

Nice guide. Works perfectly to make it FUD

JBenda - July 8, 2015, 9:21 pm

(Jun 28, 2015 09:11 AM)StreamFlooder Wrote: [\[CITE\]](#) If your using client installation thats the problem. I have the same problem with crypterminer and other crypters. Once client installation is off no problems anymore.

If installation is disabled and we are supposed to not enable any option in crypter except Self Injection, how then do we achieve Persistence crypting this way?

simon_templar - July 11, 2015, 9:52 am

because you can not use mutex?

SIM-2267642 - July 11, 2015, 12:16 pm

That's what happened to me, CybeSeal is a piece of shit, I spent a lot of time trying similar to yours until I realized that ... I suggest you demand a refund from PayPal
CyberSeal is just crap.

I can recommend you Cryptex Reborn, I use it and it supports superior in LuminosityLink. I've also heard good things about minerCrypt but I have no experience with it yet

Zeroh123 - July 13, 2015, 7:34 am

i have Cryptex Reborn crypter. and it doesnt work to bind files with the crypter. ive tested evrything from rar files to mp3 files. it just shutsdown could anyone help me please?

Dunkin' Donuts - July 14, 2015, 11:56 pm

Where can i find a tutorial for using Data protector with LL. Appreciate if someone could help me.

arkark - July 16, 2015, 10:03 pm

(May 1, 2015 03:36 PM)DaPiranha Wrote: [\[CITE\]](#) Happy this works great with Abyss Protect! A lot of my customers are satisfied.Could you please share recommended settings?

I am an Abyss owner and would very much appreciate that.

Thanks

mackmaine1587 - July 19, 2015, 2:40 pm

which crypters do we use for LL

_M5~ - July 21, 2015, 2:27 pm

Trying to find a great crypter so this is very useful! Great thread

DaPiranha - July 21, 2015, 2:53 pm

"Luminosity...Enable Installation/Startup within Luminosity,keep Anti-VM enabled as well. All you need to do is select the Luminosity binary, and under RunPE, select "Self Inject". From there, it works perfectly!"

This the setting that works with Abyss Protect and KFC Watermelon has confirmed this.

comodoro - July 31, 2015, 11:48 am

A cool crypter, nothing bad to say

Gashhey - July 31, 2015, 2:51 pm

seems quite nice tbh, ill maybe give it a try

Tostig - July 31, 2015, 3:07 pm

Should add a list on the thread with crypters that are compatible.

I know 100% that Kazy Crypter is compatible.

Gashhey - July 31, 2015, 3:58 pm

how long has this existed for?

SIM-2564555 - August 1, 2015, 2:47 am

i'm crypt by c# coding my job manually so is that RAT can be crypted by entry point and loading assem. instead runpe

byte[] - August 1, 2015, 9:51 am

(Aug 1, 2015 02:47 AM)moody2000 Wrote: [\[CITE\]](#) i'm crypt by c# coding my job manually so is that RAT can be crypted by entry point and loading assem. instead runpe

I know you can use reflection instead of a runpe, but I think it will break some features like the rootkit. Not sure if this is still accurate or not, but last I checked it was.

matissshakeris - August 4, 2015, 5:29 pm

Quetiion does rootkit even do anything? I had slaves with rootkits but still i seen them dissapear (maybe reformated)

alibomax - August 10, 2015, 1:06 am

does Darkeye crypter work with LL. pls advice settings

matissshakeris - August 10, 2015, 10:24 am

Works perferct with cloudcrypter.pw

Get FUD usually by following guide here and only leaving lumonisity do the job instead of crypter only thing crypter does is self inject.

growsidd - August 10, 2015, 2:26 pm

I will like to buy crypter. is it compatible with darkcomet

pm me soon

regards

matissshakeris - August 10, 2015, 5:20 pm

(Aug 10, 2015 02:26 PM)growsidd Wrote: [\[CITE\]](#) I will like to buy crypter. is it compatible with darkcomet

pm me soon

regards

Cloudcrypter.pw is one of best crypters on hf. Go for that. Im currently getting at worst 1 detection from nod32. But mostly FUD

Mynx - August 10, 2015, 8:13 pm

Thanks for the guide Byte! I am so impressed with the level of dedication that the Luminosity Link team are putting in.

matissshakeris - August 11, 2015, 6:58 pm

Rootkit doesn't do shit. I tested it few times. What it does:

Puts in folder /1553 and folder and stub itself gets hidden hidden as system file so to access and delete you only need to enable show system files and you can easily delete it and remove registry also and then you're back with clean pc again.

Follwowed the exact settings on there and used clouddcrypter.pw and only enabled "Self inject" on crypter and changed icon on crypter.

I didn't see any persistance from the rootkit. lol

neromaniac - August 14, 2015, 12:42 am

Anyone had luck with:

crypterfree.com

corrupted my LL file.

Mcbride - August 14, 2015, 12:50 am

Posting to find this later. Thank you

praNNkii - August 15, 2015, 12:27 pm

i dont understand this config file, can someone help me for crypting, the most slaves are unstable now.

usmgaming - August 17, 2015, 10:26 am

I have morpheus crypter, is there any way you can show me how to crypt it, it's not running when crypted.

hacker1738 - August 19, 2015, 11:07 pm

I'm trying to use Cryptex Lite, which works very well (1/35), but once crypted my file no longer works with LL (I run it in sandboxie and nothing happens/no connection to LL). Help please

HackTheScoolserver - August 22, 2015, 12:03 pm

Does it work with "CypherX Crypter"

Link: cypherx.org

Esme - August 22, 2015, 11:27 pm

(Aug 15, 2015 12:27 PM)praNNkii Wrote: [CITE](#) i dont understand this config file, can someone help me for crypting, the most slaves are unstable now.

Can you be more specific? Are you talking about the .exe.config file that's created when you build the server? If so, just crypt your .exe and rename the .exe.config file so it matches the name of the crypted file and you should be good to go.

I believe KFC will have this turned off by default in future releases as some found it confusing.

dremra - August 25, 2015, 1:22 pm

I have a question! I show that when you run the client it creates a file on programdata\randomnumber\name.exe. Will this file be encrypted after we use a crypter or only the client exe?

byte[] - August 25, 2015, 3:18 pm

(Aug 25, 2015 01:22 PM)dremra Wrote: [\[CITE\]](#) I have a question! I show that when you run the client it creates a file on programdata\randomnumber\name.exe. Will this file be encrypted after we use a crypter or only the client exe?

Haven't replied to this thread in a while, sorry. Yes, the file will be encrypted.

alexwich - August 28, 2015, 12:28 am

first of all great rat, but i run in to problems with when encrypting it Cryptex Reborn .

when i bind a file to it or use an extension spoofer idk why . if someone can help me with that it will be great.

Thanks

heska77240 - August 28, 2015, 3:55 pm

hello there is some people for say me if ByteCrypter v3 working without problem with LL ?

thank you all ;-)

EgidijusR - August 29, 2015, 9:01 am

Cryptex Reborn - now have best fud , aswell i have license for CyberSeal and Byte crypter but for now Cryptex have best results .

(Aug 28, 2015 03:55 PM)heska77240 Wrote: [\[CITE\]](#) hello there is some people for say me if ByteCrypter v3 working without problem with LL ?

thank you all ;-)

Yep its works without problem but person who made Byte crypter are lazy bastard , thats the reason why i bought cryptex reborn and cyber seal , cause byyte gives me minimum 4 detections and maximum 11 , i tried everything obfuscating playing with setings , changing icons , but right now for this day CyberSeal has 2 deteectiosns crptex yesterday , had 0 today 4 , but right now they updating cryptex so it should be 0 again

heska77240 - August 29, 2015, 11:11 am

(Aug 29, 2015 09:01 AM)EgidijusR Wrote: [\[CITE\]](#) Cryptex Reborn - now have best fud , aswell i have license for CyberSeal and Byte crypter but for now Cryptex have best results .

Probably with hopes that when one needs updating the other is still FUD.

ok thank i think i will buy Cryptex Reborn lifetime :-)

Rietje - September 3, 2015, 12:39 pm

Is luminosity compitable with obfuscators? and if so, can you name me a few?

matissshakeris - September 4, 2015, 2:27 pm

By the way DO NOT use lumonisity install feature. It will add runtime detections even with a good crypter. This tutorial is false. As we need to wait kfc watermelon to fix the issue with startup being detected. Just use crypters startup.

merso - September 6, 2015, 1:29 pm

Hello

Im very interested in buying LL but have some questions?

1.I read that LL have website visitor,is that mean i can load my paid links in that way,and does that mean i can earn on it?(i mean does LL have silent ad clicker or need "real"bot to click ad after i load it)

2.Botkill features!what bots really can kill?

3.how many slaves max can hendlle LL?

Best regards

P.S i know this is wrong section but cant post in any place i eana,becouse of my low number of posts.that is reson why cant PM directli seller and one more reason seller didnt answer my e mail before couple of days.

kaka002 - September 21, 2015, 11:49 pm

Please can someone help me with a place were i can get best crypter for LuminosityLink...

smithlinks85 - September 22, 2015, 12:55 pm

thanks bro. very helpful. i really appreciate, keep it up. kudos

Simpleman.simplelife - September 24, 2015, 2:37 pm

So, can people share what crypters are working for them. Still haven't decided. 20\$ for 1 month seems high. opinions ?

Esme - September 24, 2015, 3:35 pm

I used Cryptex with Luminosity and it worked just fine.

?Cyber - September 24, 2015, 3:36 pm

Just tested it with Cyber Crypter and it works great.

Nice guide OP.

SIM-1472198 - September 26, 2015, 5:07 pm

CAn someone provide a settings for Diverse Basic? Thanks!!

WarninG_v7 - September 26, 2015, 5:24 pm

Very nice guildle.

What_a_trip - October 3, 2015, 11:38 am

Noob and recent LL user...no slaves as yet as I'm still working towards binding/injecting something other than .exe file type. Love the GUI...very Noob friendly. Definitely vouch for LL's possibilities...just need to get my ass in gear to figure out how to bind/inject/spread.

Simpleman.simplelife - October 4, 2015, 4:44 pm

Anyone using StatycCrypt? im having trouble fudding it

SomeoneFromGoverment - October 6, 2015, 8:30 am

Going to buy it soon.?

saavas - October 11, 2015, 5:07 am

Byte Crypter doesn't work.

I used Self Injection + NET.Self inj

These two can be combined? maybe this error

Wolfenstone - October 18, 2015, 11:23 am

I used ByteCrypter with LL,too.

Self Injection + NET.Self inject works fine on my exe

saavas - October 20, 2015, 8:43 am

now it works. but other issue- autostart doesnt

kaka002 - October 25, 2015, 12:01 am

Can some one help the best host where i can host LL and no problem:

I don't wanna use

NO-IP

SPAM.com

Because i don't have confidence in them...

xc0der - October 25, 2015, 1:39 am

DarkEye is good and stable i would advice to go it

HackTheScoolserver - November 7, 2015, 7:30 am

How do you test the server. Is there a possibility tho do this in a virthal machine, because some features like the installation or the ring3rootkit don't start in a VM.

What are the recomented settings for Abyss Protect.

Jean_42 - November 8, 2015, 2:37 am

Hi everybody

Does someone can help with dataprotector and LL ?

If i must put the differents option in LL, where is the persistance option ?
In DP, should I put svchost, Applaunch, vbc, RegAsm, RegSvcs or Itself ?
Seem to be itself with no option.

Thanks for help

HackTheScoolserver - November 9, 2015, 1:56 pm

Hello KFC Watermelon. Your Rat is really amazing.

The Startup works perfectly.

But could you please add the possibility in the builder to set the name for the folder where the server is installed. Actually it has just a random number as name.

It would be great that we can not only set the name of the installed server, but also for its folder.

KFC Watermelon - November 20, 2015, 6:24 pm

If there is any thread that needs to be remade, it's this one. I'll re-make it.

Frankiemailer - January 28, 2016, 4:36 am

I'm having problems either with the crypter or with LL. My clients goes offline after few minutes of appearing online. They never appear online again. What could be the course?

nawacks - January 29, 2016, 12:27 pm

If you use enigma that could be it, have the same problem with it, since I use another one this issue disappear. Maybe it won't work on X86 computer too, Idk I'm a very beginner. Hope you will fix your issue!

Jean_42 - February 8, 2016, 7:38 am

I have a question

I still don't know realy how refud the stub.

Does it in Client general -> upload and execute ??

When I do that, I see nothing.

There is no new connection. Does it mean, the old stub is delete for the new one ?
