OmniLite

A Lightweight wallet for Omnicoin

OmniLite is finally here! The first lightweight wallet for Omnicoin, this wallet is based on MultiBit and OmnicoinJ, and allows you to use Omnicoin without the hassle of downloading the entire blockchain!

If you find any bugs, don't hesitate to contact me. The exchange rates have not been set up, that will happen in the next release. If you have any other issues, please post questions below and I will do my best to resolve them.

If you like the app, please feel free to donate. My address is:

I haven't tested the Mac wallet (the .app folder) because I don't have a computer with OSX on it. If someone would let me know if it works, that would be great ?

Damn, that's great.
Been looking for something like this.
Thanks Mesh.

No problem.

It would be great if everyone who uses this would post some feedback here just to let me know everything is working fine.

Moon Rock - May 1, 2015, 2:38 pm

This is looking awesome, I really like Multi-Bit and not really the official wallet. I'll be downloading this in a bit ?

Some feedback;
Everything seems to work fine but sometimes it doesn't start.
Could it be because I also use the Omnicoin-qt at the same time?

I don't think that shouldn't cause an issue. They run in separate directories and don't rely on eachother...

What operating system are you using, and which executable did you download? Does it give any errors when it doesn't start?

I use Windows 7 Professional, I downloaded the one with the setup.
No errors, just didn't want to start.

Hmm, that's unusual. How often does it happen?

This may just be an issue with your computer because I don't see why the program would fail to start without an error message only some of the time, and work the rest of the time

As I said in my first post, it may be because of Omnicoin-QT which causes the OmniLite application not to start.

No, OmniLite shouldn't use any of the same files as Omnicoin-qt, and I have run them both together without any problems. But I have encountered the problem of things just not starting sometimes with things like chrome, etc. so I think this will be just a problem with your computer. Try running the standalone version from github.

I WANT THE DATA CODES!!! - May 2, 2015, 4:40 am

Damn, this is now my main wallet to use for OMC

thanks OP

Do they use the same port/socket?

And maybe he has a firewall issue.

Also...nice release. Hopefully more users test this and get rid of bugs. How large is the Omnicoin Chain anyways?

I was thinking the same thing. The only port that could interfere would be p2p, but that shouldn't crash keep the client from launching...

About 263 MB.

Mons - May 2, 2015, 1:20 pm

Looks like a great wallet, OP.

Thank you a lot!

Oh damm....this is freakin wat I wanted. Thanks a ton mate

Underd?g - May 5, 2015, 7:17 am

This looks awesome. Downloading it now.

Dave Skylark - May 20, 2015, 3:55 pm

Any update for this?

It looked like a good project but it doesn't seem to have that much activity.

What kind of an update are you looking for? Adding exchange rates isn't high on my priority list, I am quite busy with school around this period. Do you have suggestions for other improvements?

Omniscient - May 27, 2015, 3:12 pm

Any new comments on this? How many downloads have you had?

I can't tell how many downloads I have had, git hub doesn't track downloads unfortunately. Everything seems to be working fine though

adampelletgun - June 12, 2015, 2:43 am

Great program.

Thanks for the release ;)

H.K.S - June 12, 2015, 10:11 am

Amazing that you created this. Great release, surely going to help alot.

SIM-2015410 - June 12, 2015, 4:16 pm

Appreciate the positive comments guys.

As always, looking for some feedback on the reliability, etc. I need to know if there are any bugs with it.

NoMercy - June 14, 2015, 4:24 am

Thanks for the great release. I won't personally use it since I prefer core with bitcoin but I think it will help people be more interested in Omnicoin. Well done.

SIM-2015410 - July 22, 2015, 1:40 am

Seems like this is working fine still, because I have only had one message about it and that was resolved.

I believe his issues was caused by the blocks chain not finding a block for around 18 hours.

How do I move my wallet from omnicoind to omniLite? I've tried copying the .wallet file and renaming it to replace the files generated by omniLite but it doesn't want to open :/

Create a new wallet in OmniLite and then send all your coins to it. There is also an import option somewhere, where you can import your QT wallet file. I don't know where because I don't have the program, though.

The import option requires .key files while the file I have is a .wallet ?

Sorry, I mixed it up with something else. OmniLite is a fork of MultiBit, and the MultiBit help pages say:

Quote:Import private keys from the Bitcoin Core client

This is not supported. The easiest way to move bitcoin is to perform a standard Bitcoin transaction to a receiving address provided by MultiBit.

So yeah. As I suggested, your best bet is to just create a new wallet and send your coins to it.

If you have any specific addresses (Vanity addresses, for example) you can import them by following this guide:

https://www.multibit.org/en/help/v0.5/help_importASingleKey.html

To get the private key from an address in Omnicoin-qt, go to Help -> Debug -> Console. If you have a passphrase on your wallet, unlock it with the command
walletpassphrase <passphrase> 600

Then export your private keys with
dumpprivkey <address>

Finally, lock your wallet again
walletlock
