Thread: [Qt Desinger, lineEdit Problem](#)

SIM-1866423 - May 1, 2015, 4:13 am

Hi guys, im working on QtDesinger to make some basic app. So I got little weird problem today. There following codes ;

PHP Code

```
<?php
void MainWindow::on_pushButton_2_clicked()
    QString str = ui->lineEdit->text();
    QMessageBox::information(this, "Hello World!", str);
}
```

I'm writing to lineedit bla bla etc.. not return anything on my QMessageBox. I already check syntax just in case, but im really do not see anything wrong (but im still not sure)

[img]<http://i.hizliresim.com/rQV8a3.png>[/img]

Any idea what its return null ? ?

Does the lineEdit have a string in it?

Are you even sure it's null, and not just an empty string?

Of course it does. I'm try %100 same way with that video ;

(2.45-2.56) Check it u can understand what I try to do.

What happens if you change it to this?

PHP Code

```
<?php
#include <iostream>

void MainWindow::on_pushButton_2_clicked()
    QString str = ui->lineEdit->text();
    QMessageBox::information(this, "Hello World!", "This message should appear!");
```

```
std::cout << "String in message box is: \"" << str << "\"" << std::endl;  
}
```

What output do you get in the console?
