Thread: [Simple ping tool](#)

PureLifeCoding - May 1, 2015, 5:13 am

Hey guys. I made a REALLY SIMPLE batch script cause I like to watch as my victims lag offline :P I thought maybe you guys will have a use for it too.

Code @Echo Off

Color 0a

:T

CLS

Set /P pinghost=IP To Ping:

Set /P pingtime=Times To Ping:

ping.exe %pinghost% -n %pingtime%

Pause

Goto T

This won't do anything to a computer and/or network. It might've worked in the 80/90s or whatever but it doesn't work any more. I think you should read this thread and stay with us for the better:

<https://hackforums.net/showthread.php?tid=4111888> .

??? Who said anything about using this to damage a computer/network? I said "I like to watch as my victims lag offline" Meaning, when I ddos someone I like to run this script to watch them lagging and finally go offline.

I worded it wrong, YOU can't lag someone remotely (probably not even on a local network) with a Batch script, it will take extremely long. Please correct me if I'm wrong.

This script has nothing to do with lagging or even attempting to DOS someone. All it does is constantly ping them...

Oh my god it's like talking to a wall...

Step 1. Ddos someone (NOT WITH THIS SCRIPT)
Step 2. Start up this script and keep pinging them
Step 3. Watch their response time raise and packets drop
????????????

what he means, from my understanding, is he uses this script to "monitor" the ping times when he is DDoSing someone to assure it is affective. So if he uses a Stresser Service, he fires up this script and watches their ping response times get longer and longer.

'Palladium - May 1, 2015, 6:23 am

Either way brother, you shouldn't be making this types of scripts (malicious type of scripts).

If you'd of read his responses, he is saying he can ddos with other products then use this to check their response time.

You're being a prick. Read his reply

'Palladium - May 1, 2015, 6:25 am

You could've explained it better, sorry about that. I thought you meant it in another way. What can I

say? Sometimes a person can't read properly!! I'm tired af right now. And, nice use of variables in your script.

This is in no way malicious. Literally all this does is monitor someone's response time. ??????????

Seemed pretty clear to me, and I haven't slept more than an hour in the past 48 hours.

@OP, many home routers ignore ICMP ECHO packets (ping requests) so you may not get reliable results with this, but best of luck anyway.

I would imagine if your paying for a service, a home computer wouldn't be the target. Now if you personally own a botnet then that is a different story I guess.

Agreed though I understood what he was saying by the second post...some people just have a tendency to get blinders on and regurgitate whatever lines have been used in the past.

White Light - May 1, 2015, 2:16 pm

That's especially true in cases where someone tries to fit into something by dropping the "party line" in places where it isn't truly applicable.
